This report summarizes the stormwater drainage analysis for the proposed Cooper University Hospital Tower A project in Camden, New Jersey.

SITE INFORMATION AND HISTORY

For the purpose of this report, “site” refers to the portion of Cooper University Healthcare main hospital campus area associated with proposed Tower A, which is proposed near the intersection of Dr Martin Luther King (MLK) Boulevard and Haddon Avenue. All improvements are within Block 1402 Lot 1.

Cooper University Health Care (CUHC) is proposing to improve the Cooper University Hospital located in Camden, New Jersey. The initial phase of this project entails the construction of “Tower A.” CUHC continues to evaluate future phases the CUHC will submit as part of any separate application. The proposed Tower A will be a 10-story hospital-building expansion with a footprint of approximate 35,570-square-feet. Cooper intends that the Tower A expansion will better serve patients and the community by upgrading CUHC’s aging facilities with a new, state-of-the-art healthcare space.

DESIGN REQUIREMENTS

The project will disturb approximately 1.34 acres. The project will create more than one-quarter acre of “regulated impervious surface” because there is a net increase of 0.92 acres of impervious surface; and thus the project is considered a major development as defined in N.J.A.C. 7:8-1.2 (July 2023). Therefore, the project is subject to the New Jersey Stormwater requirements outlined in N.J.A.C. 7:8 and the City of Camden Stormwater Ordinance. Stormwater management is proposed for the project to meet the requirements of N.J.A.C. 7:8 (July 2023).

In accordance with groundwater recharge standards set forth in N.J.A.C. 7:8-5.4(b)2 and city requirements, the groundwater recharge requirements do not apply to the project because the project is in an Urban Redevelopment Area.

In accordance with the stormwater runoff quality standards set forth in N.J.A.C 7:8-5.5(a) and city requirements, the water quality standards are not applicable because the major development does not result in an increase of one-quarter acre or more of regulated motor vehicle surface. All proposed increase in impervious surface is roof and non-vehicular walkway.

In accordance with the stormwater runoff quantity standards set forth in N.J.A.C. 7:8-5.6(b)2 and city requirements, there is no increase, as compared to the pre-construction condition, in the peak runoff rates of stormwater leaving the site for the current and projected two-, 10-, and 100-year storm events. Any increased volume, change in timing, or increased rate of stormwater runoff will not result in additional flood damage below the point of discharge of the project.

Additionally, the City of Camden requires that the 25-year storm post development peak rate be reduced to less than or equal to the pre-development peak rate. This criterion has been satisfied.

In accordance with the green infrastructure standards set forth in N.J.A.C. 7:8-5.3(d) and city requirements, a variance from strict compliance in accordance with N.J.A.C. 7:8-4.6 is requested to utilize a BMP from Table 5-3 (extended detention basin) to meet the stormwater runoff quantity standards of N.J.A.C. 7:8-5.6. As noted previously, the groundwater recharge and stormwater runoff quality requirements are not applicable. Due to safety concerns of green stormwater infrastructure in an urban setting and the size constraints of the site, it is technically impractical to satisfy the stormwater runoff quantity requirements with a Green Infrastructure BMP. The stormwater runoff quantity requirements are met with the underground extended detention basin. The design implements low impact design to the extent possible, which is demonstrated on the Low Impact Design Checklist provided in Appendix A.

The proposed detention basin is integrated into the design of the Tower A basement. A pump and outlet control structure will control the flow before gravity-draining to the existing 24-inch brick city sewer in MLK Boulevard. Due to the proximity of the detention basin and basement walls, both the basin and basement will be waterproofed to prevent infiltration of groundwater into the system and exfiltration of collected stormwater runoff.

The city of Camden has previously required that stormwater conveyance systems be designed for the 25-year storm event. The proposed outlet pipe from the new detention system was sized based on the outflow from the basin, which is designed for up to and including the 100-year (current and projected) managed rate, so the system is more than adequate to convey the 25-year storm. No point-discharges to the ground surface are proposed, and the existing discharge points will be maintained.

STORMWATER MANAGEMENT APPROACH

Low-Impact Development

The proposed stormwater management approach for the project includes low-impact development strategies listed below, in accordance with N.J.A.C. 7:8-5.3. A Low-Impact Development Checklist for the project is provided as Appendix A.

1. Protect areas that provide water quality benefits or areas particularly susceptible to erosion and sediment loss.
2. Minimize land disturbance including clearing and grading, by redeveloping the existing hospital campus rather than a new “greenfield” elsewhere.
3. Minimize soil compaction, by redeveloping the existing hospital campus rather than a new “greenfield” elsewhere.
4. Provide low maintenance landscaping that encourages retention and planting of native vegetation and minimizes the use of lawns, fertilizers, and pesticides.
5. Provide preventative source controls.

Drainage Areas

The pre-development condition of the site is composed of one drainage area as described below (see Figure 3 for Pre-Development Drainage Area Map):

- EXDA-1 drains to point of interest POI-1, which is understood to be in the existing 24-inch brick city sewer in MLK Boulevard. The point of interest is approximately 75 feet west of the western crosswalk at the intersection with Haddon Avenue.

The post-development condition of the site is composed of one drainage area as described below (see Figure 4 for Post-Development Drainage Area Map):

- PRDA-1 drains to POI-1, which is understood to be in the existing 24-inch brick city sewer in MLK Boulevard. The point of interest is approximately 75 feet west of the western crosswalk at the intersection with Haddon Avenue. This area makes up the entire Tower A project area and is divided into the following subareas:
 - Proposed Tower A roof runoff is routed to proposed BMP-1, which is an underground extended detention basin. The proposed basin is integrated into the design of the Tower A basement. A pump and outlet control structure will control the flow before gravity-draining to the existing 24-inch brick city sewer in MLK Boulevard.
 - Site runoff along the eastern side of Tower A flows to Haddon Ave then enters the city sewer that connects to the 24-inch brick city sewer in MLK Boulevard.
 - Site runoff along the northern and western sides of Tower A flows to MLK Boulevard then enters existing inlets that tie into the 24-inch brick city sewer in MLK Boulevard.

The stormwater management design for the project accounts for the uncontrolled ground-level areas by over-detaining stormwater in the BMP to make up for the bypass volumes and rates.

NRCS Methodology

In accordance with N.J.A.C. 7:8-5.7, stormwater runoff is calculated using the USDA Natural Resources Conservation Service (NRCS) methodology, which is described in Technical Release 55—Urban Hydrology for Small Watersheds (TR-55), dated June 1986. Pre-development and post-development hydrographs are developed for each of the drainage areas described in the previous section using an area, hydrologic soil group (HSG), land cover, rainfall depth, and time of concentration. A table summarizing the area, HSG, and land cover with curve numbers for the pre-development condition is provided in Appendix B, and for the post-development condition in Appendix C.

Time of concentration is calculated using the velocity method for each drainage area described in the previous section. See Appendix D for calculations and Figure 3 for pre-development flow path and Figure 4 for post-development flow path used in the calculations.

In accordance with N.J.A.C. 7:8-5.6, stormwater analysis must be performed for current and projected storm events, as defined and determined pursuant of N.J.A.C. 7:8-5.7(c) and (d). We are using the county-specific, New Jersey 24-hour rainfall frequency data for Camden County as provided in Table 5-1 of the New Jersey Stormwater Best Management Practices Manual (July 2023) because it has larger depths than site-specific rainfall data from NOAA Atlas 14 and, therefore, results is a more conservative design. The rainfall depths are provided in the table below with design current and future rainfall depths in bold.

Design Rainfall Depths

Design Storm Event	Site-Specific Rainfall Depth [NOAA Atlas 14, Vol2, Ver3] (in.)	Table 5-1: County Specific Rainfall (in.), Camden	Current Adj. Factor, Camden	Current Rainfall (in.)	Future Adj. Factor, Camden	Future Rainfall (in.)
2-yr	3.28	3.31	1.03	3.41	1.18	3.91
10-yr	4.89	5.06	1.04	5.26	1.22	6.17
25-yr	5.98	6.28	1.00	6.28	1.00	6.28
100-yr	7.92	8.52	1.05	8.95	1.39	11.84

The hydrograph summaries calculated with the NRCS methodology are provided in Appendix B for the pre-development condition and Appendix C for the post-development condition.

Stormwater Runoff Quantity

The table below shows a comparison of peak flow for pre-construction and post-construction at POI-1. The post-construction peak rates for the current and projected two-, 10-, and 100-year storm events do not exceed that of the pre-construction peak rates. Therefore, the project complies with N.J.A.C. 7:8-5.6(b)4 and city requirements.

CURRENT RAINFALL

POI-1			
STORM EVENT	PRE-DEVELOPED DISTURBED	REGULATION	PROVIDED RATE
2-YR	1.33	1.33	1.32
10-YR	2.71	2.71	2.67
25-YR	3.55	3.55	2.87
100-YR	5.83	5.83	5.81

PROJECTED RAINFALL

POI-1			
STORM EVENT	PRE-DEVELOPED DISTURBED	REGULATION	PROVIDED RATE
2-YR	1.66	1.66	1.42
10-YR	3.45	3.45	2.86
25-YR	3.55	3.55	2.88
100-YR	8.32	8.32	6.38

STORMWATER CONVEYANCE SYSTEM

The proposed stormwater conveyance system only includes the outlet from the proposed extended detention vault. That outlet is designed to convey the peak rates from the proposed site for up to and including the 100-year (current and projected) storm. Therefore, the designed capacity is more than adequate to convey the projected flow from the 25-year storm in accordance with City of Camden requirements. All proposed storm pipes tie-in to proposed drainage structures. No point-discharges to the ground surface are proposed, as shown on the Proposed Drainage Area Map (Figure 2). Runoff coefficient and pipe conveyance calculations are provided in Appendix E.

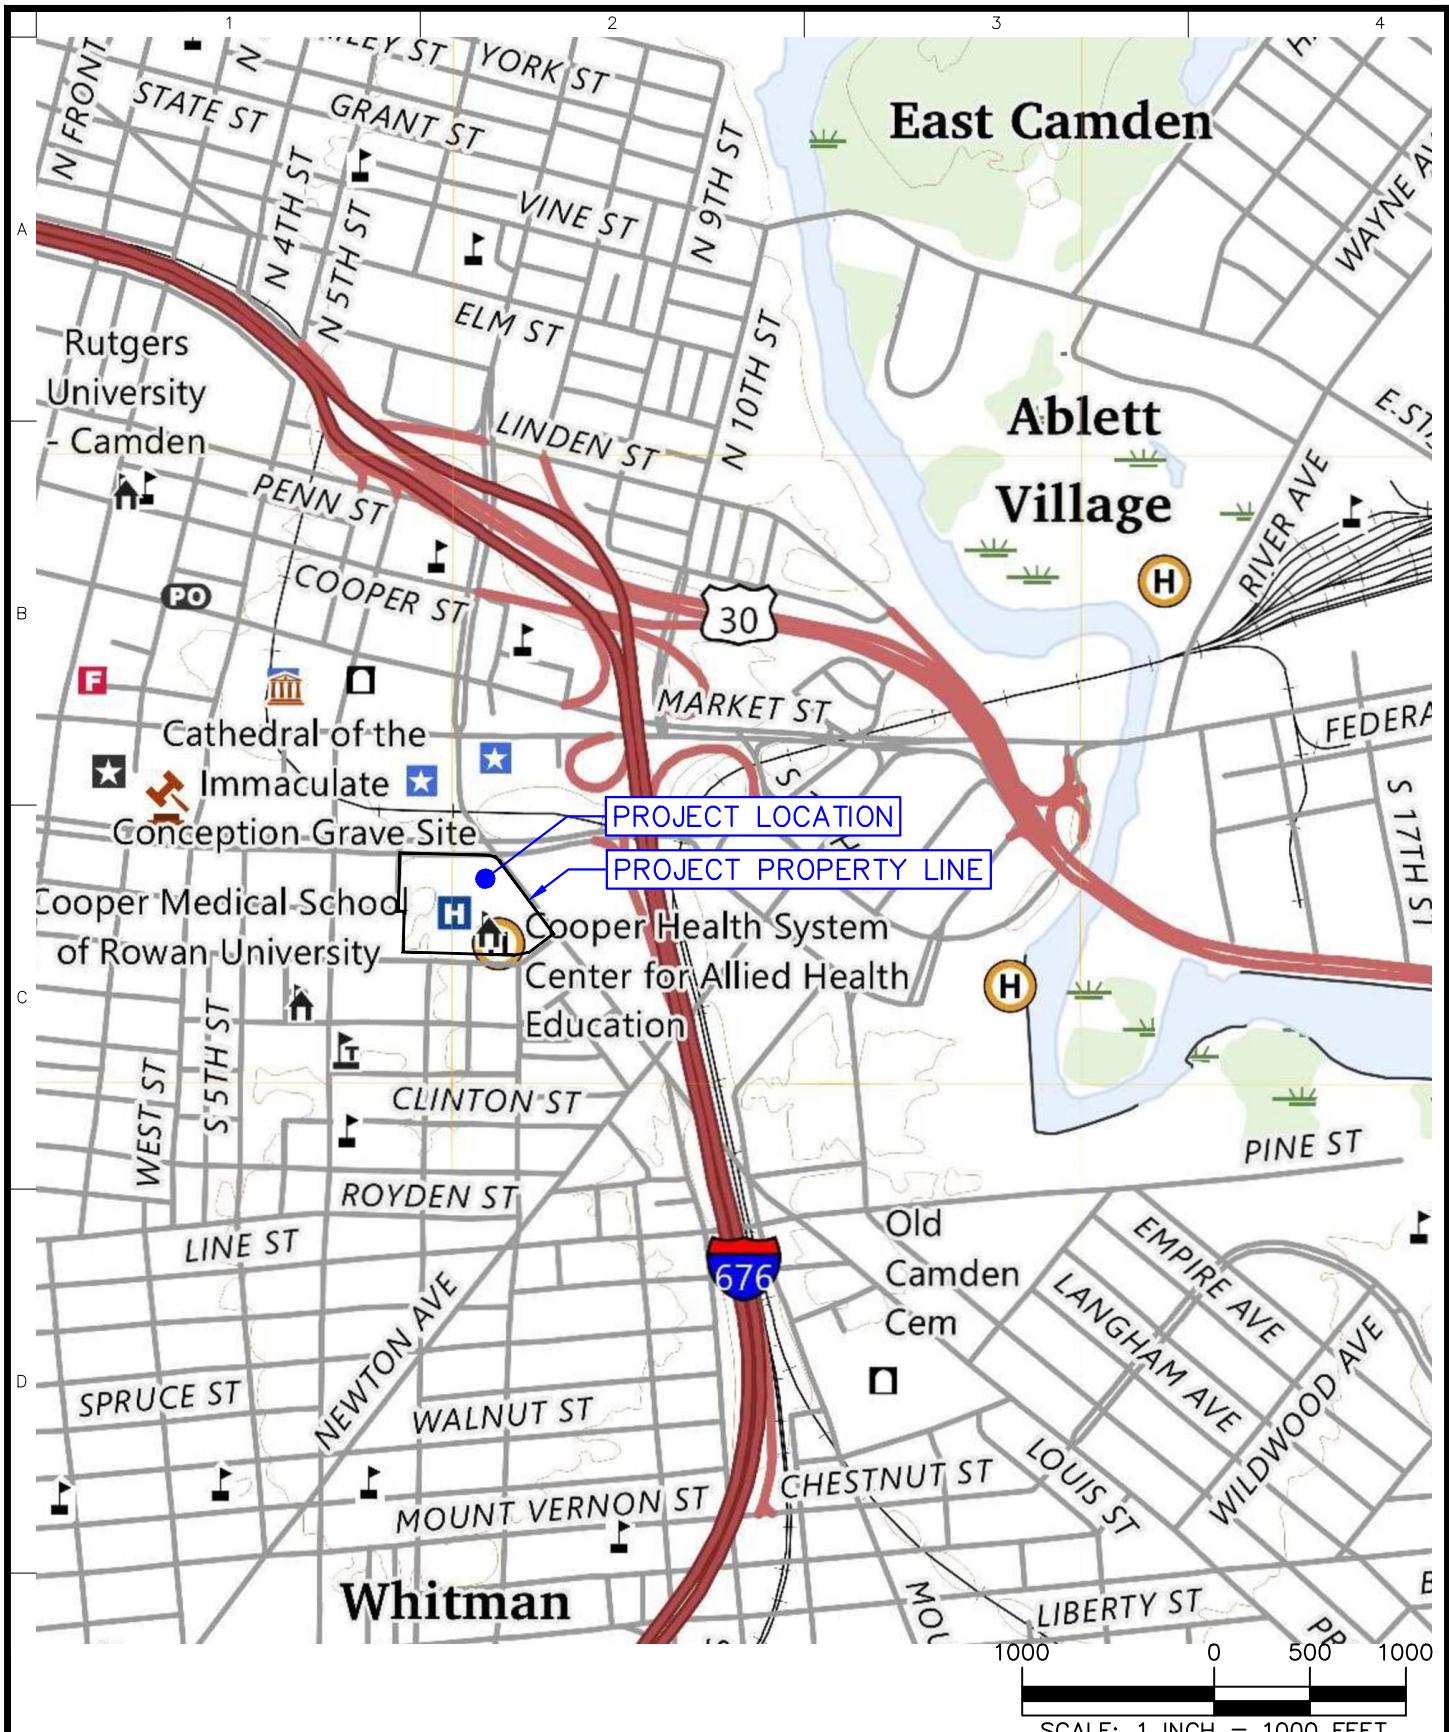

CONCLUSION

The proposed stormwater management approach meets the requirements of N.J.A.C. 7:8 that were applicable at the time of the initial application, and the City of Camden requirements by managing the post-development peak discharge rates to not exceed the pre-development peak discharge rates leaving the site for all drainage areas and the entire site as documented in this report. Because the project discharges to an existing sewer that discharges to a tidal water body, any increased volume or change in timing will not increase downstream flooding or flood damages below the point of discharge.

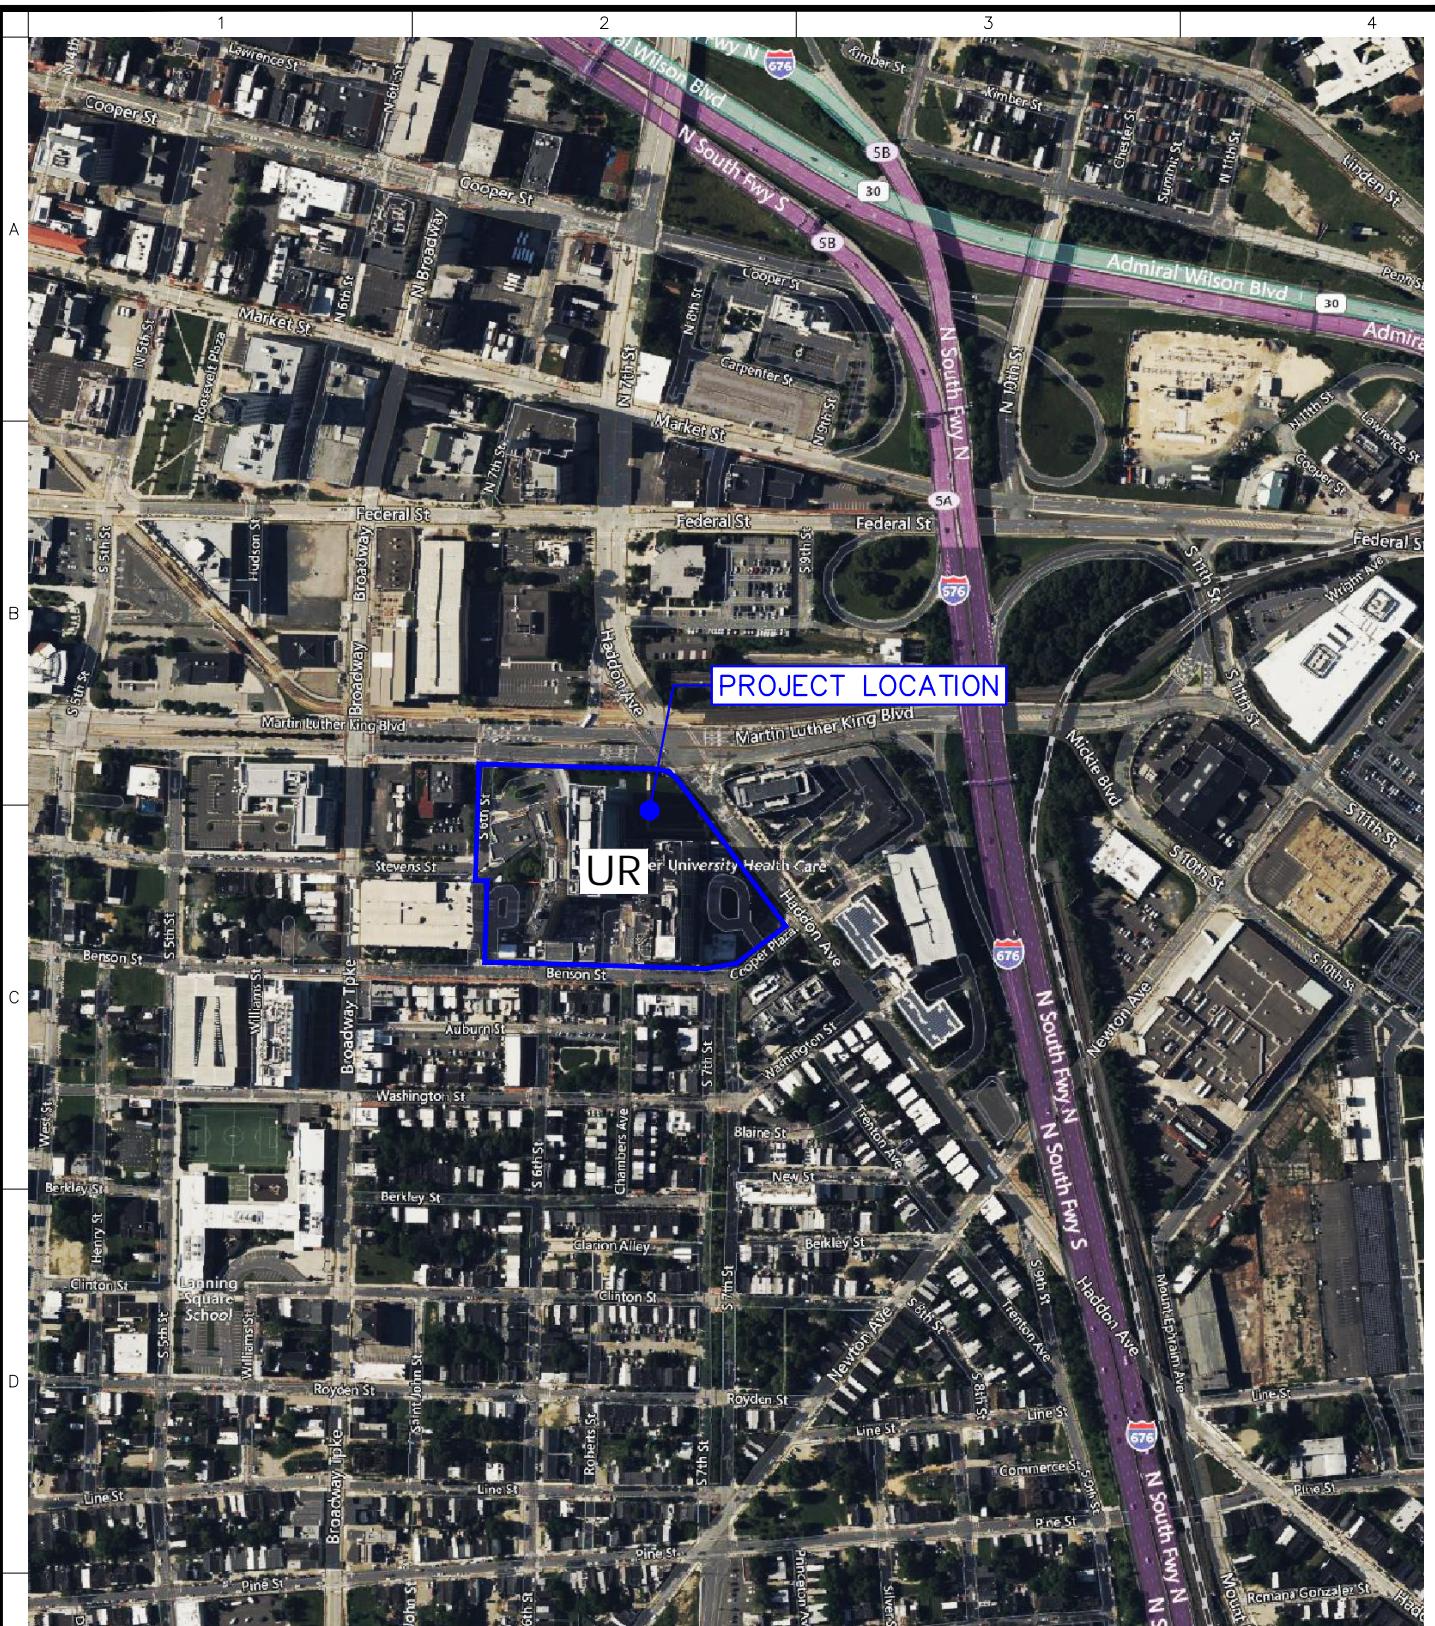

The proposed storm conveyance system has been designed to convey the peak rates from the proposed site for up to and including the 100-year storm (current and projected) because the pipe is an outflow from a stormwater vault. As such, the designed capacity is more than adequate to convey the projected flow from the 25-year storm in accordance with City of Camden requirements.

As a result, the proposed site redevelopment meets the intent of the state and city requirements and will have no adverse impact on the existing stormwater conveyance system that services the site and adjacent properties.

CITY OF CAMDEN REGULATORY REQUIREMENT NOTES

- ALL TELEPHONE, ELECTRIC, TELEVISION, AND OTHER COMMUNICATION SERVICE FACILITIES, BOTH MAIN AND SERVICE LINES, ARE TO BE INSTALLED UNDERGROUND.
- THE OWNER, OR THEIR REPRESENTATIVE, IS TO DESIGN AN INDIVIDUAL RESPONSIBLE FOR CONSTRUCTION SITE SAFETY DURING THE COURSE OF SITE IMPROVEMENTS PURSUANT TO N.J.A.C. 2:23-1.6 (O) OF THE N.J. UNIFORM CONSTRUCTION CODE AND CFR 1926.32 (O) (OSHA COMPETENT PERSON).
- ALL SITE WORK CONSTRUCTION AND DETAILS MUST CONFORM TO THE STANDARDS OF THE CITY OF CAMDEN.
- THE CONTRACTOR (NOT CITY) SHALL BE RESPONSIBLE FOR ANY AND ALL COST (LABOR, MATERIALS, EQUIPMENT) RELATED TO ANWATER MAIN ISOLATION AND BY-PASSING OF THE SEWER TO MAKE A PROPOSED CONNECTION.
- THE CITY ENGINEER AND AMERICAN WATER NOTICES OF PROPOSED SEWER WORKS AND THE REPRESENTATIVES MUST WITNESS THE WORK AND CONNECTION.
- THE APPLICANT AND CONTRACTOR (NOT CITY) ARE RESPONSIBLE FOR THE PROPER ABANDONMENT OF ALL WATER/SEWER LATERALS DISCOVERED IN THE FIELD. ALL WATER/SEWER LATERALS THAT WILL BE ABANDONED SHALL BE CUT AND CAPPED AT THE MAIN IN ACCORDANCE WITH CAPITAL IMPROVEMENTS AND MAINTENANCE ORDINANCES AND INSPECTED WITHIN 24 HOURS AFTER INSTALLATION OF NEW TAP. THE MAXIMUM OF ONE (1) TAP SHALL BE MADE FOR EACH DOMESTIC SERVICE PER FACILITY. THE TAP SHALL BE THE MAXIMUM ONE (1) SIZE SMALLER THAN THE CITY'S WATER MAIN.
- THE INSTALLATION OF ALL WATER AND SEWER MAINS SHALL COMPLY WITH CITY ORDINANCES.
- ALL WATER/SEWER MAIN INSTALLATION AND TESTING SHALL BE WITNESSED/ OBSERVED BY AN INSPECTOR OF THE CITY OF CAMDEN, AMERICAN WATER, OR PLANNING BOARD ENGINEER.
- ALL WATER/SEWER SERVICES SHALL BE INSTALLED ON APPLICANT'S PROPERTY (AND NOT WITHIN CITY RIGHT-OF-WAY); EXCEPT WHEN MAKING CONNECTIONS TO THE EXISTING WATER AND/OR SEWER SYSTEM, FROM THE BOX BODIES AND SEWER CLEANOUT RESPECTIVELY.
- THE OWNER/APPLICANT SHALL OWN, OPERATE AND MAINTAIN ALL WATER, SANITARY AND STORM SEWER MAINS AND APPURTENANCES OUTSIDE OF THE CITY RIGHT-OF-WAY.
- ALL WATER PIPES, FITTINGS AND VALVES SHALL BE TESTED AND INFECTED IN ACCORDANCE WITH AWIA REQUIREMENT.
- THRUST BLOCKS AND RESTRAINTS SHALL BE INSTALLED AT ALL BENDS AND FITTINGS. THRUST BLOCKS SHALL HAVE A 28-DAY STRENGTH OF 4,500 PSI.
- AIR RELEASE VALVES SHALL BE INSTALLED AT HIGH POINTS IN THE WATER MAIN.
- A SOLID DUCTILE IRON OR TAPPING SLEEVE SUCH AS THE APPLICANT'S REQUESTS, 2-INCHES, SHALL BE USED FOR TAPS 2'-0" AND LARGER. THE TAPPING SLEEVE SHALL PASS PRESSURE TESTING BASED ON AWIA STANDARDS BEFORE TAP IS MADE.
- FOR ALL SERVICES INCLUDED HERIN, TWO (2) GATE VALVES ARE REQUIRED THAT ARE TO BE INSTALLED DRY IN THE EASEMENT AREA. THE LOCATION OF THE TAP, AND A CURB VALVE LOCATED IN THE SIDEWALK BEFORE THE METER. TAPPING GATES SHALL BE PROVIDED IN THE DRY TAPPING. TAPING AND CURB VALVES SHALL BE DOUBLE DISC GATE VALVES AND MEET AWIA STANDARDS.
- FOR TAPS OFF MAINS 2-INCHES AND LARGER, THE APPLICANT SHALL FURNISH AND INSTALL AN ADDITIONAL TAP VALVE ADJACENT TO THE TAPPING VALVE. NO TAPS SHALL BE PERMITTED ON MAINS, LARGER THAN 20-INCHES, UNLESS THERE IS NO ALTERNATIVE. THE TAP AND CURB SPECIAL WRITTEN APPROVAL IS ISSUED BY THE CIP.
- VALVE BOX PARTS FOR ALL VALVES SHALL BE PROVIDED BY THE CONTRACTOR (NOT CITY). ALL TAPPING-GATE VALVES LARGER THAN 2-INCHES AND ALL CURB VALVES SHALL BE PROVIDED BY THE APPLICANT. A VALVE BOX, WITH THE WORD "WATER" CAST IN THE COVER, BURIED CORPORATION VALVES/STOP SHALL BE USED AT THE TAP FOR CLASS K CORPUS SERVICE AND SMALLER.
- ALL METERS SIZES 2-INCHES THROUGH 6-INCHES SHALL BE SINGLE COMPOUND METERS, AND ALL METERS 8-INCHES AND LARGER SHALL BE DUPLEX COMPOUND MANIFOLD METERS.
- ALL METERS SHALL BE ADEQUATELY RESTRAINED WITH METAL BRACKETS FASTENED TO THE FLOOR OR WALL OF OTHER APPROPRIATE MANS, AS UNFLANGES WHERE INTERNAL PIPE PRESSURE AND FLOW WARRANT. SUCH RESTRAINTS, METERS, DETECTOR VALVES, AND VALVES SHALL BE SECURED ON CONCRETE BLOCK AND TAPERED SHIMS TO PROVIDE ADEQUATE SUPPORT. METERS SHALL BE INSTALLED APPROXIMATELY 36" ABOVE FLOOR GRADE.
- ALL METER INSTALLATIONS IN METER PIT OR VAULT SHALL BE APPROVED BY CIP AND HAVE PROPER ACCESS OPENINGS FOR METER READING AND REPLACEMENT.

GRADING AND DRAINAGE NOTES

- THE CONTRACTOR SHALL VERIFY ALL INFORMATION TO 13. STRUCTURES SHOWN ON THESE DRAWINGS INCLUDE, BUT ARE NOT LIMITED TO, DRAINS, STRUCTURES (WALLS, COLUMNS AND SPANLEDGES), CONCENTRIC METER MANHOLES, METER PITS AND UNDERGROUND VAULTS ARE NOT STRUCTURALLY DESIGNED. THE DETAILS PROVIDED ARE FOR CONSTRUCTION PURPOSES ONLY. PIPE PENETRATIONS, PIPE INVERTS AND GROUND ELEVATIONS AT THE STRUCTURE RIM OR GRATE ONLY. THE CONTRACTOR IS RESPONSIBLE FOR DETERMINING THICKNESS AS WELL AS REINFORCING. THE MINIMUM DIAMETER MANHOLE SHALL BE 48-INCHES. A MINIMUM ACCESS DIAMETER OF 30-INCHES SHALL BE PROVIDED.
- MANHOLE COVERS SHALL BE A SOLID TYPE MARKED WITH SEWER.
- A DROP MANHOLE CONNECTION SHALL BE USED IF THERE IS A DIFFERENCE IN ELEVATION OF TWO FEET OR GREATER BETWEEN THE PIPE INVERT AND THE MANHOLE INVERT ELEVATION. REFER TO CITY DETAILS.
- ALL CONCRETE SHALL BE 4,500 PSI MINIMUM DESIGN MIX.
- THE MERIDIAN OF THE PLAN IS REFERENCED TO THE NEW JERSEY STATE PLANE COORDINATE SYSTEM (NAD 83) 2011 DERIVED USING SURVEY-GRADE GPS.
- PHOTOGRAPHIC INFORMATION SHOWN HEREON HAS BEEN OBTAINED FROM GROUND SURVEYS BY LANCASTER ENGINEERING AND ENVIRONMENTAL SERVICES, INC. DURING JULY 2023.
- ELEVATIONS SHOWN ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) DERIVED USING SURVEY-GRADE GNSS EQUIPMENT.
- CONVERSION FROM NAVD 1988 TO NGVD IS AS FOLLOWS: EL. 17.00 (NGVD 88) + 1.09 = EL. 18.09 (NGVD 29).
- AS PER THE NATIONAL FLOOD INSURANCE PROGRAM FIRMS TITLED, CAMDEN COUNTY, NEW JERSEY, COMMUNITY PANEL 28 OF 305, MAP NUMBER 340000, THE LAST 100 FEET OF THE PROPERTY, PRIMARILY LIES IN "OTHER AREAS" NOT WITHIN FLOOD AREA.
- EXISTING FRAMES, COVERS, AND GRATES IN AREAS WHERE GRADES WILL BE REVISED BY FILLING OR CUTTING, FINAL GRADES WILL INCLUDE MANHOLES, HANDLES, VALVE BOXES, INLETS, ETC., IN AREAS OF CUT, CONTRACTOR SHALL PROVIDE REQUIRED COVERAGES FOR ALL DRAINS AND STORMWATER LINES AS SPECIFIED BY THE UTILITY PURVEYOR.
- PROPOSED STORMWATER PIPING, TRENCHES MAY REQUIRE EXCAVATION IN AREAS NOT CAPABLE OF SUPPORTING THE PROPOSED SYSTEMS. STABILIZATION AND APPROVAL OF EXCAVATION MOUNDS WILL BE REQUIRED. OWNER'S GEOTECHNICAL ENGINEER MUST APPROVE BEDDING MATERIALS USED FOR STABILIZATION AND THE DEPTH OF THE OVER EXCAVATION.
- CONTRACTOR IS RESPONSIBLE FOR LOCATING UTILITY CROSSINGS AND PROVIDING UTILITY DROPS AS REQUIRED. CONTRACTOR SHALL NOTIFY ENGINEER IMMEDIATELY IF CROSSING CONFLICT OCCURS.
- GRADING FOR ADA ACCESSIBLE ROUTES, RAMPS, AND STAIRS SHALL BE IN ACCORDANCE WITH THE NEW JERSEY AMERICAN WITH DISABILITIES ACT ARCHITECTURAL BARRIES, REMOVAL AND CONSTRUCTION MANUAL. SLOPES SHALL BE 1:12, (1:12, (2:12, (2:12, (3:12, (3:12, (4:12, (4:12, (5:12, (5:12, (6:12, (6:12, (7:12, (7:12, (8:12, (8:12, (9:12, (9:12, (10:12, (10:12, (11:12, (11:12, (12:12, (12:12, (13:12, Low Impact Development Checklist

A checklist for identifying nonstructural stormwater management strategies incorporated into proposed land development

According to the NJDEP Stormwater Management Rules at N.J.A.C. 7:8, the groundwater recharge, stormwater quality, and stormwater quantity standards established by the Rules for major land development projects must be met by incorporating nine specific nonstructural stormwater management strategies into the project's design to the maximum extent practicable.

To accomplish this, the Rules require an applicant seeking land development approval from a regulatory board or agency to identify those nonstructural strategies that have been incorporated into the project's design. In addition, if an applicant contends that it is not feasible to incorporate any of the specific strategies into the project's design, particularly for engineering, environmental, or safety reasons, the Rules further require that the applicant provide a basis for that contention.

This checklist has been prepared to assist applicants, site designers, and regulatory boards and agencies in ensuring that the nonstructural stormwater management requirements of the Rules are met. It provides an applicant with a means to identify both the nonstructural strategies incorporated into the development's design and the specific low impact development BMPs (LID-BMPs) that have been used to do so. It can also help an applicant explain the engineering, environmental, and/or safety reasons that a specific nonstructural strategy could not be incorporated into the development's design.

The checklist can also assist municipalities and other land development review agencies in the development of specific requirements for both nonstructural strategies and LID-BMPs in zoning and/or land use ordinances and regulations. As such, where requirements consistent with the Rules have been adopted, they may supersede this checklist.

Finally, the checklist can be used during a pre-design meeting between an applicant and pertinent review personnel to discuss local nonstructural strategies and LID-BMPs requirements in order to optimize the development's nonstructural stormwater management design.

Since this checklist is intended to promote the use of nonstructural stormwater management strategies and provide guidance in their incorporation in land development projects, municipalities are permitted to revise it as necessary to meet the goals and objectives of their specific stormwater management program and plan within the limits of N.J.A.C. 7:8.

Low Impact Development Checklist

A checklist for identifying nonstructural stormwater management strategies incorporated into proposed land development

Municipality: City of Camden

County: Camden Date: 03/20/2024

Review board or agency: City of Camden Planning Board

Proposed land development name: Cooper University Hospital – Tower A

Lot(s): 1 Block(s): 1402

Lot(s): Block(s):

Project or application number: TBD

Applicant's name: _____

Applicant's address: _____

Telephone: _____ Fax: _____

Email address: _____

Designer's name: Kyle MacGeorge

Designer's address: 1 University Square Drive, Suite 110, Princeton, NJ 08540

Telephone: 609-282-8000 Fax: 609-282-8001

Email address: kmacgeorge@langan.com

Part 1: Description of Nonstructural Approach to Site Design

In narrative form, provide an overall description of the nonstructural stormwater management approach and strategies incorporated into the proposed site's design. Attach additional pages as necessary. Details of each nonstructural strategy are provided in Part 3 below.

The proposed stormwater management approach for the project includes low-impact development strategies listed below, in accordance with N.J.A.C. 7:8-5.3.

1. Protect areas that provide water quality benefits or areas particularly susceptible to erosion and sediment loss.
2. Minimize land disturbance including clearing and grading, by redeveloping the existing hospital campus rather than a new "greenfield" elsewhere.
3. Minimize soil compaction, by redeveloping the existing hospital campus rather than a new "greenfield" elsewhere.
4. Provide low maintenance landscaping that encourages retention and planting of native vegetation and minimizes the use of lawns, fertilizers, and pesticides.
5. Provide preventative source controls.

Part 2: Review of Local Stormwater Management Regulations

Title and date of stormwater management regulations used in development design:

City of Camden Zoning and Land Use and Stormwater Control and Management Code: N.J.A.C. 7:8 (July 2023)

Do regulations include nonstructural requirements?

Yes: No: _____

If yes, briefly describe: Nonstructural requirements in the city ordinance are consistent with the N.J.A.C. code requirements, which include evaluating nonstructural strategies as part of the stormwater management plan to reduce the need for structural requirements.

List LID-BMPs prohibited by local regulations: N/A

Pre-design meeting held? Yes: Date: 6/2023 No: _____

Meeting held with: Langan, HKS, Hammes, CUHC

Pre-design site walk held? Yes: Date: 6/7/2023 No: _____

Site walk held with: Langan

Other agencies with stormwater review jurisdiction:

Name: Camden County Soil Conservation District

Required approval: NJPDES Approval

Name: _____

Required approval: _____

Name: _____

Required approval: _____

Part 3: Nonstructural Strategies and LID-BMPs in Design

3.1 Vegetation and Landscaping

Effective management of both existing and proposed site vegetation can reduce a development's adverse impacts on groundwater recharges and runoff quality and quantity. This section of the checklist helps identify the vegetation and landscaping strategies and nonstructural LID-BMPs that have been incorporated into the proposed development's design to help maintain existing recharge rates and/or minimize or prevent increases in runoff quantity and pollutant loading.

A. Has an inventory of existing site vegetation been performed?
Yes: _____ No: X

If yes, was this inventory a factor in the site's layout and design? Yes: _____ No: X

B. Does the site design utilize any of the following nonstructural LID-BMPs?

Preservation of natural areas? Yes: _____ No: X (*N/A*)

If yes, specify % of site: _____

Native ground cover? Yes: _____ No: X (*N/A*)

If yes, specify % of site: _____

Vegetated buffers? Yes: _____ No: X

If yes, specify % of site: _____

C. Do the land development regulations require these nonstructural LID-BMPs?

Preservation of natural areas? Yes: _____ No: X

If yes, specify % of site: _____

Native ground cover? Yes: _____ No: X

If yes, specify % of site: _____

Vegetated buffers? Yes: _____ No: X

If yes, specify % of site: _____

D. If vegetated filter strips or buffers are utilized, specify their functions: N/A

Reduce runoff volume increases through lower runoff coefficient:
Yes: _____ No: _____

Reduce runoff pollutant loads through runoff treatment:

Yes: _____ No: _____

Maintain groundwater recharge by preserving natural areas:

Yes: _____ No: _____

3.2 Minimize Land Disturbance

Minimizing land disturbance is a nonstructural LID-BMP that can be applied during both the development's construction and post-construction phases. This section of the checklist helps identify those land disturbance strategies and nonstructural LID-BMPs that have been incorporated into the proposed development's design to minimize land disturbance and the resultant change in the site's hydrologic character.

A. Have inventories of existing site soils and slopes been performed?

Yes: No:

If yes, were these inventories factors in the site's layout and design? Yes: No:

B. Does the development's design utilize any of the following nonstructural LID-BMPs?

Restrict permanent site disturbance by land owners?

Yes: No:

If yes, how: _____

Restrict temporary site disturbance during construction?

Yes: No:

If yes, how: _____

Consider soils and slopes in selecting disturbance limits?

Yes: No:

If yes, how: No steep slopes exist on-site pre-construction. All soils on-site are urban fill.

C. Specify percentage of site to be cleared: 100% Regraded: 100%

D. Specify percentage of cleared areas done so for buildings: 100%

For driveways and parking: 0% For roadways: 0%

E. What design criteria and/or site changes would be required to reduce the percentages in C and D above? *Nothing can be changed to reduce the percentages in C and D above because the majority of the site is building area, which requires regrading around it.*

F. Specify site's hydrologic soil group (HSG) percentages:

HSG A: _____ HSG B: _____ HSG C: *100%* HSG D: _____

G. Specify percentage of each HSG that will be permanently disturbed:

HSG A: _____ HSG B: _____ HSG C: *100%* HSG D: _____

H. Locating site disturbance within areas with less permeable soils (HSG C and D) and minimizing disturbance within areas with greater permeable soils (HSG A and B) can help maintain groundwater recharge rates and reduce runoff volume increases. In light of the HSG percentages in F and G above, what other practical measures if any can be taken to achieve this?

None, entire site is urban fill with HSG D.

I. Does the site include Karst topography? Yes: _____ No: X

If yes, discuss measures taken to limit Karst impacts:

3.3 Impervious Area Management

New impervious surfaces at a development site can have the greatest adverse effect on groundwater recharge and stormwater quality and quantity. This section of the checklist helps identify those nonstructural strategies and LID-BMPs that have been incorporated into a proposed development's design to comprehensively manage the extent and impacts of new impervious surfaces.

A. Specify impervious cover at site: Existing: 81% Proposed: 91%

B. Specify maximum site impervious coverage allowed by regulations: 90%

C. Compare proposed street cartway widths with those required by regulations: N/A

Type of Street	Proposed Cartway Width (feet)	Required Cartway Width (feet)
Residential access – low intensity		
Residential access – medium intensity		
Residential access – high intensity with parking		
Residential access – high intensity without parking		
Neighborhood		
Minor collector – low intensity without parking		
Minor collector – with one parking lane		
Minor collector – with two parking lanes		
Minor collector – without parking		
Major collector		

D. Compare proposed parking space dimensions with those required by regulations: N/A

Proposed: _____ Regulations: _____

E. Compare proposed number of parking spaces with those required by regulations: N/A

Proposed: _____ Regulations: _____

F. Specify percentage of total site impervious cover created by buildings: 80%

By driveways and parking: 0% By roadways: 0%

G. What design criteria and/or site changes would be required to reduce the percentages in F above?

None, the building footprint cannot be reduced because of project requirements.

H. Specify percentage of total impervious area that will be unconnected:

Total site: 0% Buildings: _____ Driveways and parking: _____ Roads: _____

I. Specify percentage of total impervious area that will be porous:

Total site: 0% Buildings: _____ Driveways and parking: _____ Roads: _____

J. Specify percentage of total building roof area that will be vegetated: 0%

K. Specify percentage of total parking area located beneath buildings: 0%

L. Specify percentage of total parking located within multi-level parking deck: 0%

3.4 Time of Concentration Modifications

Decreasing a site's time of concentration (Tc) can lead directly to increased site runoff rates which, in turn, can create new and/or aggravate existing erosion and flooding problems downstream. This section of the checklist helps identify those nonstructural strategies and LID-BMPs that have been incorporated into the proposed development's design to effectively minimize such Tc decreases.

When reviewing Tc modification strategies, it is important to remember that a drainage area's Tc should reflect the general conditions throughout the area. As a result, Tc modifications must generally be applied throughout a drainage area, not just along a specific Tc route.

A. Specify percentage of site's total stormwater conveyance system length that will be:

Storm sewer: 34% Vegetated swale: N/A – urban site Natural channel: N/A – urban site

Stormwater management facility: 2% Other: _____

Note: the total length of the stormwater conveyance system should be measured from the site's downstream property line to the downstream limit of sheet flow at the system's headwaters.

B. What design criteria and/or site changes would be required to reduce the storm sewer percentages and increase the vegetated swale and natural channel percentages in A above?

This is not possible in an urban setting like this one.

C. In conveyance system subareas that have overland or sheet flow over impervious surfaces or turf grass, what practical and effective site changes can be made to:

Decrease overland flow slope: This is not possible in an urban setting like this one.

Increase overland flow roughness: This is not possible in an urban setting like this one.

3.5 Preventative Source Controls

The most effective way to address water quality concerns is by pollution prevention. This section of the checklist helps identify those nonstructural strategies and LID-BMPs that have been incorporated into the proposed development's design to reduce the exposure of pollutants to prevent their release into the stormwater runoff.

A. Trash Receptacles

Specify the number of trash receptacles provided: 0

Specify the spacing between the trash receptacles: N/A

Compare trash receptacles proposed with those required by regulations:

Proposed: 0 Regulations: N/A

B. Pet Waste Stations

Specify the number of pet waste stations provided: 0

Specify the spacing between the pet waste stations: N/A

Compare pet waste stations proposed with those required by regulations:

Proposed: 0 Regulations: N/A

C. Inlets, Trash Racks, and Other Devices that Prevent Discharge of Large Trash and Debris

Specify percentage of total inlets that comply with the NJPDES storm drain inlet criteria: 100% of downstream inlets

D. Maintenance

Specify the frequency of the following maintenance activities:

Street sweeping: Proposed: 0 Regulations: N/A

Litter collection: Proposed: 0 Regulations: N/A

Identify other stormwater management measures on the site that prevent discharge of large trash and debris:

Sumps and traps are provided in all downstream inlets before discharging to BMPs.

E. Prevention and Containment of Spills

Identify locations where pollutants are located on the site, and the features that prevent these pollutants from being exposed to stormwater runoff:

Pollutant: N/A Location: _____

Feature utilized to prevent pollutant exposure, harmful accumulation, or contain spills:

Pollutant: N/A Location: _____

Feature utilized to prevent pollutant exposure, harmful accumulation, or contain spills:

Pollutant: N/A Location: _____

Feature utilized to prevent pollutant exposure, harmful accumulation, or contain spills:

Pollutant: N/A Location: _____

Feature utilized to prevent pollutant exposure, harmful accumulation, or contain spills:

Pollutant: N/A Location: _____

Part 4: Compliance with Nonstructural Requirements of NJDEP Stormwater Management Rules

1. Based upon the checklist responses above, indicate which nonstructural strategies have been incorporated into the proposed development's design in accordance with N.J.A.C. 7:8-5.3(b):

No.	Nonstructural Strategy	Yes	No
1.	Protect areas that provide water quality benefits or areas particularly susceptible to erosion and sediment loss.	X	
2.	Minimize impervious surfaces and break up or disconnect the flow of runoff over impervious surfaces.		X
3.	Maximize the protection of natural drainage features and vegetation.	X	
4.	Minimize the decrease in the pre-construction time of concentration.		X
5.	Minimize land disturbance including clearing and grading.	X	
6.	Minimize soil compaction.	X	
7.	Provide low maintenance landscaping that encourages retention and planting of native vegetation and minimizes the use of lawns, fertilizers, and pesticides.	X	
8.	Provide vegetated open-channel conveyance systems discharge into and through stable vegetated areas.		X
9.	Provide preventative source controls.	X	

2. For those strategies that have not been incorporated into the proposed development's design, provide engineering, environmental, and/or safety reasons. Attached additional pages as necessary.

The time of concentration will decrease due to decreased ground-level open space and added stormwater conveyance systems. However, runoff will be managed by BMPs and the peak runoff rates leaving the site are lower than the pre-construction conditions.

There is limited space to fit vegetated open-channel conveyance. Therefore, storm piping is proposed to convey runoff. As noted above, this runoff is directed to BMPs for management of quantity and rate per NJDEP and City of Camden requirements.

Appendix F
City of Camden Stormwater Fee Calculation

APPENDIX XVIII

STORMWATER FEES

Stormwater Rate

The stormwater rate is imposed on each and every new, renovated, change in use, rehabilitated and/or rebuilt Single-Family Residential Developed Property, Other Residential Developed Property, Non-Residential Developed Property, and Vacant Property, other than Exempt Property, and the owner and non-owner users, and is hereby set as follows:

- (a) The Equivalent Stormwater Unit (ESU) rate is ten dollars and seventy-seven cents (\$10.77). The ESU measurement is 1,530 square feet of impervious area.
- (b) The stormwater rate imposed on Single-Family Residential Developed Properties shall be categorized into three tiers based on the estimated amount of impervious area as follows:
 - High - Single-Family Residential Developed Property - greater than one thousand five hundred and seventy-eight (1,578) square feet of estimated impervious area. The ESU shall be 1.25 and the stormwater rate set at thirteen dollars and forty-six cents (\$13.46).
 - Medium - Single-Family Residential Developed Property - equal to or greater than one thousand four hundred and eighty-five (1,485) square feet and less than or equal to one thousand five hundred and seventy-eight (1,578) square feet of estimated impervious area. The ESU shall be 1.00 and the stormwater rate set at ten dollars and seventy-seven cents (10.77).
 - Low - Single-Family Residential Developed Property - less than one thousand four hundred and eighty-five (1,485) square feet of estimated impervious area. The ESU shall be .75 and the stormwater rate set at eight dollars and eight cents (\$8.08).

- (c) Stormwater charges for all other properties will be based on the following calculation:
$$\begin{aligned} & (\text{Gross Lot Size in sq. ft.} \times \text{Runoff Coefficient}) / 1,530 \text{ sq. ft.} = \# \text{ of ESU} \\ & \# \text{ of ESU} \times \$10.77 = \text{Monthly Fee} \end{aligned}$$

$$\begin{aligned} & ((339,870 \text{ SF}) \times (0.90)) / 1530 \text{ SF} = 199.93 \text{ ESU} \\ & (199.93 \text{ ESU}) \times (\$10.77) = \$2,153.25 \end{aligned}$$

The runoff coefficient assumed for each land use category is shown below:

<u>Land Use</u>	<u>Coefficient Applied</u>
Bar-Restaurant - Entertainment	.75
Car Sales Lot	.95
Cemetery w/Monuments	.20
Central Business District	1.00
Common Area	.20
Garage or Misc. Res.	.55
Group Residence	.75
Ind. Warehouse-Factory	.90
Industrial Railway	.85
Assume 0.90 for Institution - Hospital	
Institution-Sch.-Church	.90
Misc. Commercial	.90
Mixed Comm.-Res.-Apt.	.75
Multi-Family Apartment	.75
Multi-Family Residential	.40
Office	.91
Parks & Playgrounds	.20
Public Accommodations	.91
Retail	.91
Single Family Attached	.75
Single Family Detached	ESU
Sport or Rec. Facility	.60
Utility	.90
Vacant Land Use	.20
Vehicle Related Use	.90
