SUPPORTING DOCUMENTATION

AREA 2

ASTM E1527-21 USER QUESTIONNAIRE

When the "user" (the party for whom the assessment is being prepared) of the Phase I is required to help the environmental professional identify recognized environmental conditions at the property, a "User Questionnaire" is completed by the user to help gather information that may identify recognized environmental conditions at the property.

We ask that you answer the six questions below to the best of your knowledge. We understand that, in some circumstances, you may have little or no information. Still, we encourage you to complete and return the questionnaire as soon as possible. This will allow us to reflect the fact that the Questionnaire was completed when we issue our report as is required. Completion of the assessment to the new standard, when conducted in connection with the asset purchase of a real property, may entitle the user to certain federal liability protections that result from conducting "All Appropriate Inquiries" into the previous ownership and uses of a property.

On the second page of this form is a list of documentation. The E1527-21 Standard requires that the User will ensure that the consultant is made aware that any of these materials exist for a site, and if so, that these documents be provided for the consultant's review. Please indicate whether any of these documents are available, and ensure that Environmental Services Company will either receive copies or be provided an opportunity to review the relevant materials.

We appreciate your assistance. If you have any questions, feel free to contact us.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   No

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   No

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   No

4. Does the purchase price/loan amount for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   Yes

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of specific chemicals that are present or once were present at the property? (c.) Do you know of spills or other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?

   No

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

   No

REPRESENTATIVE PROJECTS

PROJECT EXPERIENCE PRIOR TO PENNONI

Borough of Merchantville - Downtown Brownfields Redevelopment, Merchantville, NJ (2018)
Project Manager - Provided environmental services which included review of previous reports and data and preparation of a Remedial Investigation (RI) Workplan, remedial cost estimate, and Hazardous Discharge Site Remediation Fund (HDSRF) application related to the Merchantville Boro Downtown Brownfields Redevelopment project. Based on the initial review, site and remedial investigations (SI/RI) were required for several Areas of Concern (AOCs) including but not limited to inactive rail lines, chlorinated solvent groundwater contamination and vapor intrusion (VI). The HDSRF was approved in May 2018; however, prior to commencing the approved workplan, additional funds were requested to prepare an updated Preliminary Assessment (PA) and VI testing due to site and regulatory changes since the previous PA and investigations.

Blonder Tongue Laboratories, Inc. – Old Bridge, Middlesex, NJ (2018)
Project Manager - Provided LSRP oversight for the Industrial Site Recovery Act (ISRA) case which included preparing a Preliminary Assessment (PA) for the site in accordance with the New Jersey Department of Environmental Protection's (NJDEP) Technical Requirements for Site Remediation (NJAC 7:26E), ISRA (N.J.S.A. 13:1K and N.J.A.C. 7:26B), Administrative Requirements for the Remediation of Contaminated Sites (ARRCS) Rules (N.J.A.C. 7:26C) and applicable guidance. Based on the findings of the PA, site investigation (SI) activities were conducted to confirm / deny the presence of a release from a former hazardous waste storage area and other AOCs. Based on the SI findings, chlorinated groundwater contamination was identified requiring delineation and a VI study due to samples exceeding NJDEPs screening levels. Additional RI was conducted which delineated the vertical and horizontal limits of the plume and determined that VI is not a concern at the site based on a soil gas and indoor air investigation. On-going monitoring of the groundwater contamination was proposed in pursuit of a restricted-use Response Action Outcome (RAO) via monitored natural attenuation (MNA).

Laws & Laws – Cumberland County, Commercial Township, NJ (2017)
Project Manager - Provided LSRP oversight for the remediation of a former gasoline underground storage tank (UST) which was removed from the site but not properly closed. A review of the existing case file and NJDEP correspondence identified the need to investigate groundwater because of the prior removal action. The results of a groundwater investigation conducted in the vicinity of the former UST did not identify contaminants of concern above NJDEPs Ground Water Quality Standards (GWQS), as such, no further action was recommended for the UST and an unrestricted use Response Action Outcome (RAO) was issued for the AOC.

Fellowship House of South Camden – Camden, NJ (2017 – 2018)
Project Manager - Provided LSRP oversight for the site initially to attain Childcare Licensing for the site. The findings of the Preliminary Assessment identified multiple AOCs requiring further investigation. The results of Site and Remedial Investigations determined the site was underlain by historic fill requiring remediation. Due to the existing structure, site features and site use at the time, an Alternative Remedy was proposed for the capping of the site. The NJDEP reviewed and approved the proposed Alternative Remedies, and the remediation was completed via capping and institutional controls. Following issuance of a Remedial Action Permit (RAP) for Soil, a restricted use RAO for the entire site was issued by the LSRP.

Rafael Molina School – Mastery Charter Schools, Camden, NJ (2017 - 2018)
Project Manager - Provided LSRP oversight for the remediation of historic fill at the site. Due to the site use as a school, the on-going building addition and site features, an Alternative Remedy Proposal was prepared and submitted to the NJDEP to remediate historic fill. Upon NJDEP approval of the Alternative Remedy, the engineering caps were installed and documented in a deed restriction for the property in pursuit of a RAP for soil and restricted use RAO.

Camden Waterfront Redevelopment – Preliminary Assessment Report, Camden, NJ (2017 – 2018)
Project Manager - Supported the LSRP of Record in preparing the Preliminary Assessment Reports and remedial action estimates for the Camden Waterfront Redevelopment project which began in 2017 and is currently under construction. The site was formerly occupied by multiple industrial properties from before the turn of the century until the 1990's. Former occupants included the former Ferry Terminal, Campbells Food, lumber yards but mostly consisted of former Radio Corporation of America (RCA) operations during the second half of the 19th century. Prior to the most recent redevelopment, the site was utilized for parking lots to support the nearby attractions. The findings of the PA and subsequent reports identified multiple AOCs requiring additional investigation/remediation, the results of which documented the presence of PCB laden historic fill material, historic fill, chlorinated solvent groundwater contamination, and a "discharge pit" contaminated with chlorinated volatiles and PCBs. Subsequent remedial excavations and chemical / biological amendment injections were conducted to remediate the former discharge pit concurrent with the project build-out. Currently, the site is undergoing redevelopment and engineering control installations as part of the remedial actions. On-going monitoring and maintenance will be conducted to ensure the protectiveness of the remediation.

Lakeside Business Park LLC - 2 Independence Boulevard, Gloucester County, NJ (2017)
Project Manager - provided LSRP services which included preparation of a PA that identified two AOCs, fill material and historic agricultural use, in connection with the site. Based on the PA findings, the site was historically agricultural land until it was operated by a local mine adjacent to the site. Test pits and soil borings were advanced for sample collection to characterize suspect fill material and historically applied pesticides in accordance with NJAC 7:26E and guidance. Analytical results did not identify the presence of targeted compounds at concentrations above NJDEP soil remediation standards as such, a due diligence entire site unrestricted use RAO was issued for the site.

Weequahic Park – Department of Parks, Essex County, NJ (2011)
Project Manager - Provided environmental services that included the completion of an environmental Preliminary Assessment (PA) for the County of Essex's Weequahic Park. The PA was completed in accordance with the New Jersey Department of Environmental Protection's (NJDEP) Technical Requirements for Site Remediation (NJAC 7:26E) and submitted to the NJDEP Green Acres Program for funding. The PA was requested by Green Acres as part of a due diligence effort for the property. The PA included a comprehensive evaluation of the historic site operations, an ownership history, a review of reasonably available environmental files/maps/data, and a review of third-party regulatory database to determine whether AOCs were present at the site.

Branchbrook Park –Department of Parks, Essex County, NJ (2010)
Project Manager - Provided environmental services that included the completion of an environmental Preliminary Assessment (PA) for the County of Essex's Weequahic Park. The PA was completed in accordance with the New Jersey Department of Environmental Protection's (NJDEP) Technical Requirements for Site Remediation (NJAC 7:26E) and submitted to the NJDEP Green Acres Program for funding. The PA was requested by Green Acres as part of a due diligence effort for the property. The PA included a comprehensive evaluation of the current and historic site operations, an ownership history, a review of reasonably available environmental files/maps/data, and a review of third-party regulatory database to determine whether AOCs were present at the site. Additional investigation of site AOCs including historic fill was subsequently conducted based on the PA findings.

PREVIOUS PROJECT EXPERIENCE AT PENNONI FROM JANUARY 2007 TO OCTOBER 2017

Former Pharmaceutical Manufacturing Facility – Remedial Investigation, Bergen County, NJ (2014)
Environmental Scientist - Conducted the remedial investigation of a former pharmaceutical manufacturing site in Bergen County, NJ. The site has operated in the manufacture of fine chemicals and pharmaceutical intermediates since the turn of the century until 2011. Two active ISRA cases are associated with the property with an extensive case history. Mr. Zjawin assisted the LSRP in evaluating the results of previous investigations and historic documents to determine the investigations and regulatory actions necessary for ISRA compliance. The investigation and remediation of select AOCs was conducted by other consultants between 1999-2012 which identified 89 AOCs about the site. AOCs included an open terracotta piping system, wastewater treatment systems, former and active USTs /ASTs, storage areas, production rooms, suspect disposal areas, and groundwater contamination. Additional investigations were conducted by Pennoni that demonstrated delineation of contaminants of concern (COCs) in soil and groundwater. Remedial actions are proposed to remediate a No.6 fuel oil spill prior to implementation of a presumptive remedy and the issuance of an RAO for the industrial establishment. The site structures were demolished in 2015 and the site is slated for redevelopment into a multistory condominium and community park.

Remedial Investigation/Remedial Action Work plan (Brownfield), Camden, NJ (2013)
Environmental Scientist - Prepared a RAWP and Permit applications for the proposed in-situ treatment of a chlorinated solvent groundwater plume originating from an underground vault and other sources. The RAWP proposed off-site delineation of the plume and investigation of a former AST prior to implementation of the in-situ treatment. Previous remedial activities included source removal, chemical injections, and installation of a slurry wall. A negative pressure vapor mitigation system was installed under a portion of the building and is effective in remediating vapor intrusion. Responsibilities included assisting in the design of additional soil and groundwater remedial investigations and the remedial action selection to treat the groundwater contamination.

Publicly Traded Insurance Comp. - Due Diligence/Cost Evaluation, Sites, NJ, CT, & PA (2013)
Environmental Scientist - Provided pre-foreclosure due diligence and risk evaluation of seven industrial and commercial properties for a mutual life-insurance company based in New York City. The project included evaluating sites with significant environmental history and consulting with the Asset Management Team and general counsel. We provided ASTM Phase I's, Preliminary Assessment Reports, and letter reports summarizing remediation cost estimates and regulatory requirements for each of the sites. Regulatory involvement with the properties included state agencies from New Jersey (Industrial Site Remediation Act), Connecticut (Property Transfer Program), and Pennsylvania (Act II). Pennoni continues to work with the client providing consulting services for property transactions in the northeast.

Former Automotive Service/Sales – Preliminary Assessment, Remedial Investigation, &, Union City, NJ (10/12 – 3/13)
Environmental Scientist - Retained to conduct due diligence and the subsequent remediation prior to the transfer of the property. The site operated between the 1930's and 2012 as an automotive sales and service center. The results of the Preliminary Assessment identified three hydraulic lifts requiring additional investigation. During remediation activities, impacted soils were observed in one of the three excavations emanating from a previously unknown UST. Impacted soils were stockpiled, characterized, and properly disposed of off-site. Prior to backfill, post-excavation soil samples were collected and analyzed in accordance with NJDEP regulations and guidance. It was determined that based on the hydrogeological attributes of the underlying formation and evaluation of site data, PAH contamination detected in one post-excavation sample was determined to be limited due to the presence of bedrock on the sidewalls and bottom of the excavation. Furthermore, utilizing compliance averaging, the calculated

average was determined to be below the NJDEP residential soil standard. Based on the results of the investigations, no further action was recommended, and an unrestricted use site-wide RAO was issued by the LSRP.

Seafood Processing Plant – Active Remediation of No. 6 Fuel Oil Release, Cape May, NJ (1/10 – 10/15)
Project Manager, client contact, and Operations/Maintenance Coordinator - Retained to remediate a fuel oil spill that migrated beneath a 65,000-square foot seafood processing plant in Cape May, NJ. A multi-phase extraction (MPX) system was designed to treat free product, soil vapor, and dissolved groundwater contamination with minimal disruptions to site operations. Following three years of active remediation, remedial investigations identified a soil "hot spot" that was subsequently excavated. Post-remediation sampling results confirmed the MPX system successfully remediated extractable petroleum hydrocarbons (EPH) in soil, free product to intermittent occurrences, and decreasing groundwater contaminant trends. Following shutdown, the results of groundwater monitoring and well gauging have indicated the remediation was successful in the reduction of source mass below the site and concentrations of dissolve groundwater contamination. Pennoni is currently preparing the remedial action report and remedial action permit applications in pursuit of a restricted use Response Action Outcome (RAO).

Proposed Daycare - Due Diligence, Phase II and Alternative Analysis, Netcong, NJ (2009)
Associate Scientist - Investigated geotechnical and environmental conditions associated with fill dumped on their property from the adjoining property. Designed a retaining wall that allows the construction of the daycare facility with a useable rear yard; and studied the costs associated with alternatives which would allow the construction of the proposed daycare center to continue. The fill area was delineated utilizing aerial photographs, historic topographic maps, and digital ortho-photography and prior to investigations the property and fill boundary were surveyed and marked. Following due diligence, Pennoni oversaw a test pit investigation of the fill material that identified PCBs and PAHs more than the NJDEP residential soil standards. The results of the investigation successfully delineated the extent of fill material and characterized the contaminants of concern associated with the fill. In addition to the Site Investigation, a Preliminary Assessment (PA) was prepared for the Client in accordance with the Technical Requirements for Site Remediation (N.J.A.C. 7:26E) to establish the site's environmental conditions. The PA identified the fill material as an AOC about the site. Mr. Zjawin conducted field investigations and prepared the PA.

USEPA Superfund Site - Hexavalent Chrome Soil Remedial Action, Clarks Summit, PA (10/05 - 11/06)
Site Manager – Responsible for remedial action of impacted soils and groundwater at a 45-acre USEPA Superfund Site in Pennsylvania. Identified areas of soil contamination were designated into 5-, 10- & 15-foot grids for injection of calcium polysulfide to remediate the hexavalent chromium in soils. The injection points were determined based on depth of contamination and porosity of soils. Duties included coordinating day to day remediation activities between contractors, EPA, PADEP and the client, daily health and safety meetings, oversight of perimeter air monitoring data, data collection of injection volumes and points, liaison to local residences, collecting over 60 post-remediation samples, and operations and maintenance of two wastewater treatment systems. Other duties included oversight of installation of injection points, quarterly groundwater sampling, and weekly drinking water sampling of local residences.

Perth Amboy Housing Authority - Former Middlesex County Vocational Technical School, Perth Amboy, NJ
Environmental Scientist - Conducted the oversight of the abatement of hazardous materials from within the technical school building, oversee the demolition and cut/fill operations, as well as oversee the removal of hydraulic lifts and a UST. The site was impacted with historic fill and a release from a waste oil UST. Following additional RI and groundwater investigations, a restricted use NFA was granted with monitoring requirements of the engineering controls.

Andover County - Preliminary Assessment, Andover, NJ
Environmental Scientist - Conducted a Preliminary Assessment (PA)/Site Investigation (SI) of a County owned maintenance garage and fueling facility with known sources of contamination to establish the site's environmental conditions and identify the source of chlorinated solvents impacting site groundwater. The PA involved a review of historical documents, local and state document review and a site visit. The PA identified 36 AOCs about the property. The PA identified the parts washing equipment, floor drain, and septic system as the potential source of chlorinated solvents impacting the subject property.

Soil Remedial Action - Harrison, NJ
Environmental Scientist - Responsibilities included installation of soil borings and collection of soil samples; installation of groundwater monitoring wells and collection of groundwater samples; completion of third-party oversight for additional areas of concern on the property; and preparation of a Remedial Investigation and Remedial Action Report. The project was submitted to the NJDEP for a "No Further Action" determination under the New Jersey Cleanup Star Program.

USEPA Superfund Site - Operation & Maintenance of Wastewater Treatment System, Jersey City, NJ
Environmental Scientist - Performed operation and maintenance of a NJPDES N-3 Industrial Wastewater Treatment Plant as part of a multi-million-dollar Hexavalent Chromium remedial action. Approximately 250 gallons a minute were required from the treatment system 24-hours a day.

Responsibilities included the acquisition, review, and interpretation of current and historical site information, file reviews, and correspondence with USEPA, PADEP, NJDEP, NYCDEC, and County & City Health Department. Investigations conducted in accordance with published ASTM requirements.

Phase II Environmental Site Assessments, NJ, NY, PA
Environmental Scientist - Performed Phase II's at numerous residential and commercial facilities throughout New Jersey, New York, Pennsylvania, and Florida. Responsibilities include installation of soil borings and collection of soil samples; installation of groundwater monitoring wells and collection of groundwater samples; sensitive receptor surveys. Duties also included preparation of quarterly groundwater reports, groundwater contour maps, contaminant isopleths and interpretation of laboratory data.

City of Philadelphia - Aboveground and Underground Storage Tank Installations, Philadelphia, PA

Environmental Scientist - Assisted in developing a Deed Notice for a Jersey City Public School consistent with NJAC 7:26E. Additional duties included researching previous reports and establishing a delineation of the restricted area per the findings.

Remedial Investigations, Newark, NJ
Lead field technician - Completed remedial investigations for an apartment complex in Newark, New Jersey that was impacted by a #6 oil spill associated with two former 15,000-gallon USTs. To date, approximately 40 soil borings have been advanced, eight monitoring wells have been installed, and eight soil gas probes have been sampled. Soil contamination, groundwater contamination and free phase product are observed to be virtually site wide. In addition, the potential for vapor intrusion is present. Upon completion of the remedial investigations, a Remedial Action Work plan will be prepared to address each impacted medium.

Convalescent Center - Remedial Actions, Trenton, NJ
Lead field technician – Conducted free product recovery (No 6-fuel oil) activities at a convalescent center in Trenton, NJ since late 2006. The product recovery activities consist of the replacement of sorbent socks and direct pumping from two recovery wells using a peristaltic pump and are conducted on a biannual basis. Remedial Action Progress Reports are submitted to the NJDEP on an annual basis.

Town of Collingswood - Remedial Investigation, Collingswood, NJ
Lead field technician – Responsible for the remedial investigation of impacted soil and groundwater associated with an out of service heating oil UST in Collingswood, NJ. Based on the results of the remedial investigations, it was evident that the UST had impacted soil and groundwater on the subject property and an adjacent property. Conducted oversight of the installation of monitoring wells and injection wells for an in-situ chemical oxidation injection program to be implemented on the subject and adjacent properties to remediate the impacted soil and groundwater.

Town of Andover - Preliminary Assessment, Andover, NJ
Environmental Scientist - Conducted a Preliminary Assessment (PA) of a County owned maintenance garage and fueling facility with known sources of contamination under the Technical Requirements for Site Remediation (N.J.A.C. 7:26E) to establish the site's environmental conditions and identify the source of chlorinated solvents identified in site soils and groundwater. The PA involved a review of historical documents, local and state document review and a site visit. The PA identified 36 Areas of Concern (AOCs) about the property. The PA also identified the parts washing equipment and floor drains about the source of chlorinated solvents.

Preliminary Assessment/Site Investigation, Netcong, NJ
Environmental Scientist - Conducted a Site Investigation of suspected fill material placed on the subject property by an adjacent property owner. A total of five test pits were installed and eleven soil samples were collected and analyzed. The results of the soil sampling revealed that the soils are in fact non-native fill material and are impacted with PCBs and PAHs. In addition to the Site Investigation, a Preliminary Assessment (PA) was conducted in accordance with the Technical Requirements for Site Remediation (N.J.A.C. 7:26E) to establish the site's environmental conditions. The PA involved a review of historical documents, local and state document review and a site visit. The PA identified the fill material as an AOC about the property. Remedial investigation is proposed for the fill material.

EXECUTIVE SUMMARY

On behalf of **Parkside Business & Community in Partnership, Inc.** (**Client**), **Pennoni** has performed a Phase I Environmental Site Assessment (ESA) of 1463 and 1481 Kenwood Ave (subject property or Site). The subject property consists of a vacant lot on 1481 Kenwood Ave and a residential structure on 1463 Kenwood Ave. Residential and auxiliary structures formerly existed on 1481 Kenwood Ave. The Site is identified as Block 1299, Lots 25 (1463 Kenwood Ave) and 30 (1481 Kenwood Ave) on the Camden County tax map of the City of Camden. The ESA is being conducted for risk assessment associated with a financial transaction.

Pennoni conducted the ESA in general conformance with the scope and limitations of the ASTM International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E 1527-21. ASTM E 1527-21 is a voluntary consensus standard that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice." The procedures included in the ASTM E 1527-21 standard comply with the United States Environmental Protection Agency (USEPA) 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule.

The purpose of the Phase I ESA was to identify recognized environmental conditions (**RECs)**, controlled recognized environmental conditions (**CRECs**), historical recognized environmental conditions (**HRECs**), and business environmental risks (**BERs**) in connection with the subject property. Pennoni's Phase I ESA included a review of historical Site documents (e.g. aerial photographs, maps, etc.); a Site reconnaissance; interviews with available Site representatives; review of available regulatory records held by local, state, and federal agencies; a review of information provided by the User (i.e., the party seeking to complete an ESA of the subject property); and preparation of a report presenting Pennoni's findings, opinions, conclusions, and supporting documentation. The Phase I ESA for the subject property did not include testing or sampling of materials (e.g., soil, water, air, building materials).

Pennoni conducted a Phase I ESA of the Site in accordance with ASTM E1527-21 and applicable technical guidance documents. Our conclusions regarding **RECs**, **CRECs**, **HRECs**, and **BERs** in connection with the Site are summarized below.

Pennoni did not identify any **RECs**, **CRECs, or HRECs** in connection with the Subject Property.

Pennoni identified the following **BERs** in connection with the Subject Property:

- **BER-1: Former Structures and Heating Sources**
- **BER-2: Vertical Piping**

Pennoni identified the following **significant data gap** in connection with the Site:

- **Inaccessible Structure Interior (1463 Kenwood Ave)**

1.0 INTRODUCTION

Pennoni conducted the Phase I ESA in general conformance with the scope and limitations of the ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E 1527-21. The procedures included in the ASTM E 1527-21 standard comply with the USEPA 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule.

ASTM E 1527-21 is a voluntary consensus standard that constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice." The ASTM practice is intended to permit a User (i.e., the party seeking to complete an environmental site assessment of the subject property, in this case, New Jersey Schools Development Authority, to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability (i.e., landowner liability protections or LLPs). The practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for LLPs (e.g., continuing obligations not to impede the integrity and effectiveness of activity and use limitations (AULs), the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations).

ASTM E 1527-21 does not include any testing or sampling of materials (e.g., soil, water, air, building materials).

This report presents the findings, opinions, and conclusions, and supporting documentation for the Phase I ESA of the subject property, completed by Pennoni as of the date of this report. Information made available to Pennoni after this date, which would change the conclusions of this report, will be forwarded upon receipt.

1.1 Purpose

The purpose of the ESA was to identify recognized environmental conditions (**RECs**), controlled recognized environmental conditions (**CRECs**), historical recognized environmental conditions (**HRECs**), and business environmental risks (**BERs**) in connection with the subject property.

A **REC** is defined as: (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A *de minimis* condition is not a **REC**.

A **CREC** is defined as a **REC** affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

An **HREC** is defined as a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). An **HREC** is not a **REC**.

A BER is defined as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. Consideration of BER issues may involve addressing one or more non-scope considerations.

A *de minimis condition* is a condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Scope of Work

Pennoni's ESA for the subject property included a review of historical Site documents (e.g., aerial photographs, maps, etc.); a Site reconnaissance; interviews with available site representatives; review of available regulatory records held by local, state, and federal agencies; a review of information provided by the User (i.e., the party seeking to complete this Phase I ESA of the subject property); and preparation of a report presenting Pennoni's findings, opinions conclusions, and supporting documentation as referenced in our Proposal #PRKSD 25001P, dated June 30, 2025. The Phase I ESA requirements do not include any testing or sampling of materials (e.g., soil, water, air, building materials) or non-scope considerations unless specifically mentioned in this report.

The environmental professionals responsible for the preparation of this report have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. The report was reviewed by Andrew W. Zjawin, Division Manager of Pennoni, who was supported by various staff, including Victor Mai, Associate Environmental Scientist, also with Pennoni. Andrew W. Zjawin meets the definition of an "Environmental Professional" as defined in the ASTM standard and AAI regulation. The Environmental Professional

Statement and Signature are presented in Section 12.0 of this report. Andrew W. Zjawin, is a New Jersey Licensed Site Remediation Professional (LSRP) and has reviewed this report prior to issuance.

Non-scope considerations as defined in ASTM E1527-21 (e.g., asbestos , biological agents, cultural and historical resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, industrial hygiene, testing of building materials for presence of lead-based paint or polychlorinated biphenyls [PCBs], lead in drinking water, mold, radon, regulatory compliance, wetlands, compliance with AULs, etc.) are considered beyond the scope of standard practice.

1.3 Limitations, Exceptions, Special Terms and Conditions

Pennoni conducted a Phase I ESA of the subject property in general conformance with the scope and limitations of ASTM Standard E1527-21. The assessment of the subject property did not deviate from these standards. Data gaps that would affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases of pollutants, contaminants, petroleum and petroleum products are identified in Section 9.0.

The Phase I ESA is presumed to be valid provided it has been completed less than 180 days prior to the acquisition of the subject property or the date of the intended transaction. Recognizing that the passage of time affects the information provided in the reports; our opinions relating to Site conditions are based upon information that existed at the time our conclusions were formulated.

1.4 User Reliance

This report and findings, conclusions, and recommendations contained herein, are furnished for the sole use and benefit of the Client to aid in understanding the environmental condition and potential liabilities of the subject property. This report may not be assigned, quoted, reproduced, relied upon, or otherwise used without the express prior written consent of Pennoni.

All documents prepared by Pennoni Associates Inc. are the instruments of service in respect of the project. They are not intended or represented to be suitable for reuse by owner or others on extensions of the project or on any other project.

Any reuse without the written verification or adaptation by Pennoni Associates Inc. for the specific purpose intended will be at owner’s sole risk and without liability or legal exposure to Pennoni Associates Inc. and owner shall indemnify and hold harmless Pennoni Associates Inc. from all claims, damages, losses, and expenses arising out of or resulting therefrom.

3.2 Purpose of the ESA

The purpose of this ESA is for risk assessment associated with a financial transaction.

4.0 PHYSICAL SETTING

The following tables detail the physical setting of the Site.

Physical Setting	
Item	**Description**
Topographic Information/Regional Drainage	
Source(s)	Camden, NJ 7.5-minute United States Geological Survey (USGS) Topographic Map
Elevation	Approximately 38.07 feet above mean sea level.
Slope Direction	West
Regional Drainage	Regionally, the area is drained by the Delaware River which is located west of the Site.
Water Migratory Pathways	Local topography slopes in the northeast direction. Surface water, therefore, is expected to migrate from the properties located to the southwest. Storm drainage and surface water flow is expected to percolate through the permeable Site surfaces and into Kenwood Ave to the northeast.
Underlying Information	
Source	USGS Geology
Description:	The underlying formation is determined to be Magothy Formation (Kmg). Magothy Formation consists of fine to very coarse-grained, locally gravelly Quartz sand, clay, and silt. Sand is white and weathers yellow brown or orange brown. Clay and silt weathers to gray, brown, or white. The formation is best exposed and thickest at about 262 feet in the Raritan Bay Area and about 82 feet thick in the southern sheet.
Soil Information	
Source	United States Department of Agriculture-Nature Resources Conservation Service (USDA-NRCS)
Soil Type(s)	Based on the USDA-NRCS survey soil in the Site consists of Urban land. The soil is described as "soils in areas of high population density in the largely built environment. These soils can be significantly changed human-transported materials, human-altered materials, or minimally altered or intact “native” soils. Soils in urban areas exhibit a wide variety of conditions and properties and may have impervious surfaces, such as buildings and pavement." The Urban Land on the Site is composed of 95% Urban Land Component and 5% Udorthents.

Physical Setting	
Item	**Description**
Groundwater	
Groundwater Flow Direction	Groundwater is expected to flow to the west, parallel to the surface gradient. Deep groundwater would be expected in the joints and fractures of the underlying formation. Based on the Site's proximity to the Delaware River, ground water is expected to flow west. However, due to pumping in the area, the flow direction is likely to vary. To further evaluate groundwater conditions at the Site, a property-specific hydrogeologic investigation would be necessary.

5.0 HISTORICAL RECORDS

The purpose of consulting historical records is to develop a history of the previous uses of the subject property and surrounding area to identify the likelihood of past uses having led to RECs in connection with the subject property.

ASTM E 1527-21 requires identification of obvious uses of the subject property from the present, back to the subject property's first developed use (including agricultural uses and placement of fill dirt), or back to 1940, whichever is earlier. As such, Pennoni reviewed as many of the standard historical sources (i.e., aerial photographs, fire insurance maps, property tax files, recorded land title records, USGS topographic maps, local street directories, building department records, zoning/land use records, etc.) as were necessary and both reasonably ascertainable and practically reviewable (i.e., publicly available, obtainable from its source within reasonable time and cost constraints). In addition, the historical sources must be determined to be sufficiently useful by the environmental professional.

5.1 Historical Summary

The 1463 Kenwood Ave property is currently owned by HMG REI 1 LLC, who acquired the Site from Michael S. White through a quit claim deed dated December 9, 2020. The 1468 Kenwood Ave property is currently owned by Shonda, Toilen, and Heather Corbett, who acquired the Site from Tiffanie Corbett via deed dated June 18, 2007.

A residential structure was constructed on each of the 1463 and 1481 Kenwood Ave locations circa 1900. Two small automobile garages were located on the 1481 Kenwood Ave property from circa 1920 to at least 1950. The residential structure on 1481 Kenwood Ave was demolished and the Site was razed circa 2016.

The 1481 Kenwood Ave property is currently a vacant lot, and the 1463 Kenwood Ave property is improved with the vacant residential structure. The Site is located within an area consisting primarily of residential and commercial properties.

5.2 Historical Maps

A historical map (i.e., Sanborn Fire Insurance Maps) inquiry was placed with for the subject property. Fire insurance maps were reviewed for the years 1906, 1923, 1926, 1950, 1977, and 1982. Copies of Fire Insurance Maps are provided in **Appendix B**. A summary of the maps reviewed are provided as follows:

Historic Fire Insurance Maps Review	
Year	**Description**
1906	Site: The 1463 Kenwood Ave property (Lot 25) is divided into two lots. A residential dwelling consistent with the present-day structure is mapped on the southern lot. No features are mapped within the northern lot. The 1481 Kenwood Ave property (Lot 30) has a residential dwelling mapped on the northwest lot boundary. This building is not located on the Site in the present day.
	Surrounding Area: Kenwood Ave is adjacent to the northeast of the Site. Residential structures are adjacent to the northwest, southwest, and southeast of the Site. The surrounding area is primarily residential and commercial.
1923	Site: The 1463 Kenwood Ave property is no longer divided. Small additions appearing as porches are mapped on the northwest, northeast, and southwest sides of the residential structure. Two additional small structures are mapped on the southwest boundary of the 1481 Kenwood Ave property. The structures' uses are unclear but appear to be automobile garages. Porch additions are mapped on the northeast and southwest sides of the residential structure of 1481 Kenwood Ave.
	Surrounding Area: Additional residential and commercial structures have been constructed in the surrounding area. A religious structure is mapped southeast of the Site.
1926	Site: The addition on the northwest side of the structure on 1463 Kenwood Ave has decreased in size.
	Surrounding Area: Additional residential and commercial structures have been constructed in the surrounding area, primarily to the northeast and southwest of the Site.
1950	Site: On the 1481 Kenwood Ave property, one of the automobile structures is no longer mapped. The presence of former structures constitutes a **BER**.
	Surrounding Area: Additional residential and commercial structures have been constructed in the surrounding area, primarily to the northeast and southwest of the Site.
1977	Site: No significant changes to the 1463 Kenwood Ave property are observed from the 1950 fire insurance map. The 1481 Kenwood Ave property is not mapped.
	Surrounding Area: The area southeast of the Site is not mapped. No other significant changes to the surrounding area are observed from the 1950 fire insurance map.
1982	Site: The 1481 Kenwood Ave property is mapped again, and no significant changes are observed from the 1950 fire insurance map. No significant changes to the 1463 Kenwood Ave property are observed from the 1950 fire insurance map.
	Surrounding Area: The area southeast of the Site is mapped again, and no significant changes are observed from the 1950 fire insurance map.

5.3 Historical Aerial Photographs

Available aerial photographs were obtained from ERIS, to determine past uses and conditions of the subject property. Aerial photographs were reviewed for the years 1931, 1940, 1951, 1957, 1965, 1973, 1981, 1990, 1995, 2002, 2004, 2005, 2006, 2008, 2010, 2013, 2015, 2017, 2019, 2022, and 2023. Copies of the aerial photographs reviewed by Pennoni are included in **Appendix B**. The following table summarizes the aerial photographs reviewed.

Historical Aerial Photographs Review	
Year	**Description**
1931	Site: The quality of the photograph is poor; therefore, specific details are unclear. There appears to be a residential structure on each Site parcel, consistent with the observations on the fire insurance maps.
	Surrounding Area: Adjacent properties appear to be residential. The surrounding area is primarily urban residential and commercial. Undeveloped fields and wooded lands are observed to the north and east of the Site. Industrial facilities are observed south of the Site.
1940	Site: The quality of the photograph is poor; therefore, specific details are unclear. No significant changes to the Site are observed from the 1931 aerial photograph.
	Surrounding Area: No significant changes to the surrounding area are observed from the 1931 aerial photograph.
1951	Site: Due to the density of structures and poor quality of the photos, specific details of the Site are unclear. No significant changes to the Site are observed from the 1931 aerial photograph.
	Surrounding Area: Additional residential and commercial development is observed to the north and east of the Site.
1957	Site: Due to the density of structures and poor quality of the photos, specific details of the Site are unclear. No significant changes to the Site are observed from the 1931 aerial photograph.
	Surrounding Area: No significant changes to the surrounding area are observed from the 1951 aerial photograph.

5.4 Property Tax Files

Pennoni obtained a current tax map for the subject property from the Camden County website; a copy of the tax map is included as **Figure 2** in **Appendix A**. The subject property was identified as a portion of tax parcel Block 1299, Lots 25 and 30.

5.5 Recorded Land Title Records

The 1463 Kenwood Ave property (Lot 25) is currently owned by HMG REI 1 LLC, who acquired the Site from Michael S. White through a quit claim deed dated December 9, 2020, recorded in the Camden County Clerk's Office Book 11653, Page 1373.

The 1468 Kenwood Ave property (Lot 30) is currently owned by Shonda, Toilen, and Heather Corbett, who acquired the Site from Tiffanie Corbett via deed dated June 18, 2007, recorded in the Camden County Clerk's Office Book 8698, Page 1706.

These deeds are provided in **Appendix C**.

5.6 Historical Topographical Maps

Pennoni obtained historic topographical maps from ERIS to review past uses and activities associated with the subject property. Historic topographical maps for the Camden, NJ and Philadelphia, PA quadrangles, which includes the subject property, were reviewed for the years 1891, 1894, 1896, 1898, 1920, 1943, 1949, 1967, 1973, 1984, 1994, 1995, 2014, 2016, 2019, and 2023.

Upon review, the elevation contours and surface feature previously noted were confirmed. No significant changes to the topography of the Site or surrounding areas were observed. No buildings or other significant features are mapped on the Site. No other features or conditions considered materially significant for the purposes of this review were noted in historic topographical maps.

Copies of the historical topographical maps reviewed by Pennoni are included in **Appendix B**.

Site use is only known to have been residential. No occupants with the likely potential to environmentally impact the Site were identified in the City Directory Search. Based on the review, operations have been limited to residential since at least 1926.

Copies of the local street directories reviewed by Pennoni are included in **Appendix B**.

5.8 Previous Environmental Reports

Previous environmental reports pertaining to the subject property were not provided by the Client and were not identified from publicly available resources.

6.0 REGULATORY AGENCY RECORDS REVIEW

As part of the ESA for the subject property, Pennoni reviewed both standard and additional environmental record sources for the subject property and surrounding area. Our environmental records review consisted of a review of the following:

- the Environmental Risk Information Services Report (ERIS Report)/ERIS Radius Map Report (ERIS Report) for the subject property provided by ERIS;
- information requested from the United States Environmental Protection Agency (USEPA), Region III; and,
- information requested from the NJDEP

6.1 Standard Environmental Record Sources, Federal and State

Pennoni contracted the services of ERIS to search both state and federal environmental databases to identify potential concerns that may be associated with either the Site and/or surrounding properties. The ERIS Report provided listings, accompanied by a map, of facilities and operations with reported environmental concerns within the ASTM E 1527-21 specified search radius around the subject property.

The federal databases searched by the ERIS Report included the following:

- Federal National Priorities List (NPL) site list;
- Federal Delisted NPL site list;
- Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list;
- Federal CERCLIS No Further Remedial Action Planned (NFRAP) site list;
- Federal Resource Conservation and Recovery Act (RCRA) Corrective Action (CORRACTS) facilities list;
- Federal Treatment, Storage, and Disposal (RCRA TSD) facilities list;
- Federal RCRA (RCRA GEN) generators list;
- Federal Institutional Control/Engineering Control (IC/EC) registries; and
- Federal Emergency Response Notification System (ERNS) list.

The ERIS Report also searched the following state database files:

- State Hazardous Waste Sites (SHWS) list;
- State Solid Waste Facility/Landfill (SWF/LF) site list;
- State Leaking Underground Storage Tank (LUST) site list;
- State Registered Underground and Aboveground Storage Tank (REG UST/AST) site list;
- State Institutional Control/Engineering Control (IC/EC) registries;

• State Voluntary Cleanup Program (VCP) sites list; and

• State Brownfields sites list.

The ERIS Report is presented in **Appendix B**. Complete listings and descriptions of each of the databases searched are included in the ERIS Report.

6.1.1 Subject Property

The Site was not identified on the databases included in the ERIS Report.

6.1.2 Vicinity Properties – Facilities of Potential Concern

Pennoni reviewed vicinity properties as identified in the ERIS Report. Based on the regulatory status, distance and/or location of the properties relative to the subject property, the following significant vicinity properties were identified:

- **Reed Bros Inc (1460 Haddon Ave);** HIST RISK
    - This property is located approximately 300 feet west-southwest of the Site.
        - The HIST RISK database identified this property as a dry cleaners throughout various years from 1924 to 1947. No record of a release was identified in relation to this property.
- **Standard Oil Co of NJ (1477 Haddon Ave);** HIST RISK
    - This property is located approximately 400 feet southwest of the Site.
        - The HIST RISK database identified this property as a gasoline service station which operated at least during 1929. No record of a release was identified in relation to this property.
- **Harry's Esso Station (1477 Haddon Ave);** HIST RISK
    - This property is located approximately 400 feet southwest of the Site.
        - The HIST RISK database identified this property as a gasoline service station which operated at least during 1947. No record of a release was identified in relation to this property.
- **Garden State Oil Co (1449 Haddon Ave);** HIST RISK
    - This property is located approximately 450 feet west of the Site.

- The HIST RISK database identified this property as a fuel/automotive business from at least 1924 - 1925. No record of a release was identified in relation to this property.

- **South Jersey Laundry Co (1380 Whitman Ave);** HIST RISK
  - This property is located approximately 550 feet southwest of the Site.
  - The HIST RISK database identified this property as a dry cleaners which operated at least during 1929. No record of a release was identified in relation to this property.

Based on the locations relative to the Site and status of the regulatory cases, no impacts to the Site are expected from the surrounding properties.

6.1.3 Orphan Sites

The unfiltered ERIS Report identified 45 orphan sites, or sites which could not be mapped due to inadequate address information. Based on a review of the orphan sites summary, the listings do not present a risk to significantly impact the Site.

6.2 Regulatory Agency File and Records Review

6.2.1 New Jersey Department of Environmental Protection

Pennoni submitted online requests to the NJDEP for information regarding environmental concerns at the subject property. The following table summarizes the request submitted to the NJDEP.

Department of Environmental Protection Records Request		
Agency	**Date of Request**	**Agency Response**
NJDEP Open Public Records Act (OPRA)	July 16, 2025	Pennoni received responses for each Site property from the NJDEP on July 21 and 23, 2025, indicating the Department had no responsive records. A copy of the record request is included in **Appendix C**.

In addition, Pennoni accessed the NJDEP Dataminer website on July 25, 2025, to review information available for the subject property. The Site was not identified.

6.2.2 United States Environmental Protection Agency

A request was submitted online to the United States Environmental Protection Agency (USEPA), *MyPropertyInfo* website, on July 16, 2025, to search federal files for any

information regarding the subject property, and any instances of illegal waste discharges, Notices of Violations, and the current regulatory status of the subject property.

No records related to this inquiry were identified for the Site. A copy of the inquiry is contained in **Appendix C** of this report.

6.3 Additional Environmental Records Sources – Regional and Local

Additional Environmental Records Sources – Regional and Local			
Records Source	**Date of Records Request**	**Method of Request**	**Findings**
Camden County	July 16, 2025	Email	Camden County responded to the request on July 21, 2025, stating that they possess no pertinent records. A copy of the correspondence is available in **Appendix C**.
City of Camden	July 16, 2025	Email	The City of Camden responded to the request on July 28, 2025, stating that they possess no pertinent records. A copy of the correspondence is available in **Appendix C**.
Camden Fire Department	July 25, 2025	Email	On July 25, 2025, Pennoni requested that the City of Camden forward the OPRA request to the fire department due to a lack of submission method from the fire department. The Camden Fire Department responded to the request on July 28, 2025, stating that there are no files on record for the subject property. A copy of the request is available in **Appendix C**.

6.3.1 McRae's Industrial Directory

Historic and present Site operations utilizing significant amounts of hazardous materials have not been identified. Sufficient historic resources were available to identify the historic Site operations. No industrial operations were conducted on the Site. Therefore, review of the industrial directory is not needed at this time.

7.0 SITE RECONNAISSANCE

Pennoni personnel completed an inspection of the subject property on July 28, 2025 to visually inspect the property for evidence of **RECs** and **BERs**. Victor Mai of Pennoni met with Mr. John Bond, Project Manager of Parkside business & Community in Partnership, Inc., prior to inspecting the Site. Details of the Site are shown on **Figure 3** in **Appendix A**. Photographs of the significant features observed during the Site visit are provided in **Appendix D**.

Methodology and Limiting Conditions	
Personnel	Victor Mai
Site Inspection Date	July 28, 2025
Methodology	The Site was observed by walking the surveyed property line.
Limiting Conditions	The interior of the structure on 1463 Kenwood Ave could not be inspected due to unsafe conditions and the entryways being boarded off.

7.1 General Observations – Exterior Areas

The 1481 Kenwood Ave property is currently a vacant lot. Small amounts of construction and municipal debris were observed at the southwest end of the lot. No hazardous materials were observed on the Site. Two vertically standing pipes were observed along the southeastern Site boundary. Based on review of historic fire insurance maps and aerial photographs, no permanent structures were located in this area of the Site, and the use(s) of these pipes is unknown. The presence of these pipes and the lack of information regarding their previous uses constitutes a **BER**.

The 1463 Kenwood Ave property is currently improved with a vacant two story residential property with basement. Temporary supporting construction was observed in the rear of the building to the southwest. Municipal and vegetative waste was observed throughout the exterior areas. No hazardous materials were observed on the property. One metal pipe, standing vertically approximately 6” above the ground surface, was observed in the right-of-way between the structure and Kenwood Ave. The presence of this pipe and the lack of information regarding its use constitutes a **BER**.

No RECs were observed in the exterior areas of the Site.

7.2 General Observations – Interior Areas

The only structure present on the Site is the residential structure on 1463 Kenwood Ave. This structure was inaccessible due to the entryways being boarded and was deemed unsafe for entry. According to the Site escort, Mr. Bond, no storage tanks or other environmentally significant features are present in the structure. Based on the residential use of the structure, no adverse environmental conditions are anticipated from the structure interiors. However, inspection by Pennoni would need to be conducted to evaluate the presence of RECs or BERs in the structure such as above ground storage tanks (ASTs) or other storage. No vent pipes or fill pipes were observed along the foundation of the structure, however, the lack of interior inspection constitutes a significant data gap.

7.3 Hazardous Substances in Connection with Identified Uses

Based on the residential occupancy, it is possible that heating oil was utilized historically by the residential structures. However, no evidence of heating oil tanks existing on the Site was identified during this report. No other hazardous substances are anticipated to have been used in significant quantities based on the historic Site operations.

7.4 Other Observations

Based on the Site reconnaissance, review of records, and historical usage of the subject property, Pennoni has identified the following conditions that may impact future development of the Site or present the potential for future environmental liability.

Other Observations	
Stains or Corrosion	Not Observed
Pits, Ponds or Lagoons	Not Observed

7.4.1 Municipal Solid Waste

Municipal solid waste was observed through the 1463 Kenwood Ave property and in the southwest area of the 1481 Kenwood Ave property. No hazardous waste was observed on either of the Site properties.

7.5 Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs) are a class of compounds that were developed in the 1930s and became widely used in industry from the mid-1900s to the late 1970s. The flame resistance of PCBs made them ideal for use in electrical equipment and they did not break down or react with other chemicals, even under extreme conditions of high temperature and pressure. PCBs were commonly used, therefore, in hydraulic fluids, lubricating oils, and transformers, electric motors, switches, and capacitors (including fluorescent lighting ballasts), as well as in paints, plastics, and other household items.

Because PCBs persist in the environment and, because they are fat-soluble, they bio-accumulate in the food chain, the elimination of PCBs from distribution in commerce was mandated in federal legislation in the late 1970s. For economic reasons, however, the use of PCBs in existing equipment was allowed to continue for the useful or normal life of the equipment, as long as specific conditions were met. At present, many industrial facilities continue to rely upon PCB-containing equipment and transformers, while many commercial and residential structures continue to use lighting fixtures, switches, and other articles that contain some level of PCBs.

No transformers, capacitors, elevators, hydraulic equipment, or other common PCB-containing features were observed on the Site. Therefore, impacts relative to PCBs are not anticipated on the Site.

7.6 Potential Vapor Migration Pathways

Pennoni conducted a limited visual inspection throughout the buildings to determine the potential for subsurface vapors to enter the subject property structures. A Tier 1

Vapor Encroachment Screening (VES) for the subject property pursuant to ASTM E2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions was not performed.

Based on review of NJ-GeoWeb, no groundwater Classification Exception Areas are located within 100' of the Site boundary. No significant amounts of chemicals with the potential to cause volatile organic compound contamination to the Site have been identified; however, information regarding the past heating methods and potential oil tanks is unknown. For these reasons, vapor encroachment is not a concern for the Site; however, if future investigations identify oil tanks in connection with the Site, further evaluation of vapor encroachment should be conducted.

8.0 INTERVIEWS

Pennoni conducted the following interviews in relation to the Site.

Interviews		
Title	**Contact**	**Comments**
Key Site Manager	John Bond, Project Manager for Parkside Business & Community in Partnership, Inc.	To the best of Mr. Bond's knowledge, there have been no adverse environmental conditions on the subject property. Mr. Bond informed Pennoni that he is not aware of any heating oil tanks on the Site.
Past Owners, Operators and Occupants	Not Applicable	No previous owners were available for interview as part of this report.
Environmental Professionals	Not Applicable	No Environmental Professional associated with the subject property was interviewed at the time of the assessment.

9.0 DATA GAPS AND DEVIATIONS

According to the Standards and Practices for All Appropriate Inquiries, Phase I Environmental Site Assessments must identify data gaps that would affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases of pollutants, contaminants, petroleum and petroleum products, and controlled substances on the subject properties and to explain the significance of these data gaps. The following issues represent instances when either the investigation was hindered in some way, or where some issue was identified as a potential for concern but insufficient information was available to draw a conclusion or rule out that the issue did not represent a recognized environmental condition.

No property valuation was provided for review; however, the Client stated that the purchase price/loan amount for the Site reasonably reflects the fair market value. Therefore, Pennoni does not consider this a significant data gap.

Pennoni was unable to interview former owners of the subject property; however, the previous uses of the subject property are documented in the historical sources reviewed by Pennoni. Therefore, Pennoni does not consider this data gap to be a significant constraint on our ability to provide an opinion regarding RECs on the subject property.

The interior of the residential structure on 1463 Kenwood Ave was unable to inspected due to the entryways being boarded up and unsafe structural conditions. The Site escort, Mr. Bond, stated that there are no heating oil tanks in the structure; however, inspection by Pennoni would be required to confirm this. Therefore, the lack of interior inspection **is considered a significant data gap**.

10.0 NON-SCOPE CONSIDERATIONS

Pennoni reviewed available information regarding the following non-scope considerations.

Substances that are outside the scope of this practice (for example, emerging contaminants that are not hazardous substances under the CERCLA) may be regulated under state law and may be federally regulated in the future.

Historically, many production processes may have included the use of per- and polyfluoroalkyl substances (PFAS), including but not limited to metal plating applications, particularly chrome plating processes, soap/ cleaning product manufacturing, industrial cleaners, textile manufacturers, car washes, printing, plastic/resin manufacturing. As no operations on the Site which likely included the manufacturing or use of PFAS were identified, PFAS (in addition to perfluorooctanoic acid/perfluorooctane sulfonate (PFOA/PFOS)) are not likely to have been discharged at the Site.

Except for PFOA and PFOS, the remaining PFAS are not a listed as a hazardous substance under CERCLA nor are they a petroleum product; therefore, the assessment of the potential use of the remaining PFAS at the subject property is considered a non-scope consideration with respect to the Phase I ESA.

The remaining non-scope considerations as defined in ASTM E1527-21 are considered beyond the scope of standard practice.

11.0 FINDINGS AND CONCLUSIONS

Pennoni conducted a Phase I ESA of the Site in accordance with ASTM E1527-21. Our conclusions regarding **RECs**, **CRECs**, **HRECs**, **BERs,** and **significant data gaps** in connection with the Site are summarized below.

Pennoni did not identify any **RECs, CRECs, or HRECs** in connection with the Subject Property.

Pennoni identified the following **BERs** in connection with the Site:

BER-1: Former Structures and Heating Sources – A residential structure and two apparent automobile garages formerly existed on 1481 Kenwood Ave. The residential structure was constructed circa 1900 and was removed circa 2016. The garage structures were constructed circa 1920 and removed circa 1950. The residential structure on 1463 Kenwood Ave was constructed circa 1900 and is still present. The heating sources for these structures are unknown. Based on the date of construction, it is likely that they initially utilized coal; however, the source could have changed to fuel oil or natural gas during later years. No evidence of USTs was observed during Site reconnaissance; however, USTs could potentially exist on the Site, and an AST(s) could potentially exist in the 1463 Kenwood Ave structure.

The presence of former Site structures and absence of information regarding historical heating at the Site constitutes a **BER**. More specifically, the BER is associated with potential operations, USTs, and/or ASTs associated with the former structures that may be (or may have been) present.

BER-2: Vertical Piping – Two vertically standing pipes were observed along the southeastern Site boundary of 1481 Kenwood Ave. Based on review of historic fire insurance maps, aerial photographs, and other historical records, no permanent structures, storage tanks, or other features potentially associated with the pipes were identified in this area of the Site.

One metal pipe, standing vertically approximately 6” above the ground surface, was observed in the right-of-way between the structure on 1463 Kenwood Ave and the street. Review of historical records did not identify an underground storage tank or other features potentially associated with this pipe. The presence of these pipes and the lack of information regarding their previous uses constitutes a **BER**.

Pennoni identified the following **significant data gap** in connection with the Site:

Inaccessible Structure Interior (1463 Kenwood Ave) – The interior of the residential structure present on 1463 Kenwood Ave was unable to be inspected during the Site inspection due to the entryways being boarded up and unsafe building conditions.

Project Status:	(1) Receptor Control (Air Stripper)- RI/RAS: Not Required , DESIGN: Completed , CONSTR: Completed , O&M: Not Required		

Desc/Res of Environmental Concerns:

The Parkside Well Field supplies Camden City with 20% of its water supply during peak usage periods. In 1988 routine sampling revealed that the water from the three supply wells at the well field was contaminated with chlorinated volatile organic compounds at levels exceeding New Jersey Drinking Water Standards. For several years the water was effectively treated at the well field using minor treatment technologies but in 1997 increasing levels of contamination forced the Camden City Water Department to shut the wells down. NJDEP's Remedial Response Element subsequently completed a water supply alternatives analysis that concluded the most cost-effective remedy was to install an air stripper at the well field to treat two of the supply wells and keep the third well out of service. The City of Camden completed construction of the air stripper in 1999 using funds provided by NJDEP and is operating and maintaining the system. Additional investigative work is underway to identify possible sources of the ground water contamination at this site.

Desc/Res of Environmental Concerns:

This site consists of four municipal wells that serve residents of Collingswood Borough, Haddon Township and Woodlynne Township. Routine testing conducted by the Borough of Collingswood in 1991 revealed the wells were contaminated with volatile organic compounds at levels exceeding New Jersey Drinking Water Standards. The primary contaminants were trichloroethylene (TCE) and tetrachloroethylene (also known as perchloroethylene, or PCE). In 1992, after completing a Remedial Action Selection (RAS), NJDEP's Remedial Response Element recommended installation of two packed tower air strippers at the well field to treat the water. The Borough of Collingswood installed the air strippers in 1995 using funds provided by NJDEP and is operating and maintaining the systems. Additional investigative work is underway to identify possible sources of the ground water contamination at this site.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List: NPL

The U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL) includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program, based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. This data includes NPL sites represented as polygons, where available, that can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. As site investigation and remediation progress, OUs may be added, modified or refined. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 8, 2025

National Priority List - Proposed: PROPOSED NPL

Sites proposed by the U.S. Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 8, 2025

Deleted NPL: DELETED NPL

Sites deleted from the U.S. Environmental Protection Agency (EPA)'s National Priorities List (NPL). The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites represented as polygons, where available, can be sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). These site boundaries represent the footprint of a whole site, the sum of all the Operable Units (OUs) and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes. Where there is no polygon boundary data available for a given site, the site is represented as a point.

SEMS List 8R Active Site Inventory: SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. This data includes SEMS sites from the List 8R Active file as well as applicable sites from the EPA's Facility Registry Service map tool.

Government Publication Date: Apr 25, 2025

SEMS List 8R Archive Sites: SEMS ARCHIVE

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. This data includes sites from the List 8R Archived site file.

Government Publication Date: Apr 25, 2025

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA). This database was provided by the United States Environmental Protection Agency (EPA). Refer to SEMS LIEN as the current data source for Superfund Liens.

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 6, 2025

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites that have indicated engagement in the treatment, storage, or disposal of hazardous waste which requires a RCRA hazardous waste permit.

Government Publication Date: Jan 6, 2025

RCRA Generator List: RCRA LQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 6, 2025

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). RCRA Info is the U.S. Environmental Protection Agency's (EPA) comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

ECs encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. The EC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. Federal Institutional Controls- ICs: FED INST

List of Institutional controls (ICs) made available by the United States Environmental Protection Agency (EPA). ICs are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site. The IC listing includes remedy component data from Superfund decision documents for applicable sites on the final or deleted on the National Priorities List (NPL); and sites with a Superfund Alternative Approach (SAA) Agreement in place. The only sites included that are not on the NPL; proposed for NPL; or removed from proposed NPL, are those with an SAA Agreement in place.

Land Use Controls Information System: LUCIS

The Land Use Controls Information System (LUCIS) database is sourced from the U.S. Department of the Navy (DON). This data contains information for former Base Realignment and Closure (BRAC) properties across the United States. DON's BRAC office was tasked with tracking certain base closures while requiring the prevention of risks to human health and the environment of those properties with LUCs in place. Regarding currently available LUC Sites data, the sites listing is limited to centroid point locations for the overall installation property boundaries. Formerly obtained LUC Sites data may reflect site details that applied previously for a BRAC property.

These boundaries of Institutional Control areas at sites on the U.S. Environmental Protection Agency's (EPA) National Priorities List (NPL), or as Proposed or Deleted, are sourced from the EPA NPL Superfund Site Boundaries dataset, refreshed by the Shared Enterprise Geodata and Services (SEGS). The EPA's NPL includes the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. Institutional controls are non-engineered instruments such as administrative and legal controls that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Data provided by external parties is not independently verified by EPA. This boundary data is made available to the public strictly for informational purposes.

These pending sites were a group of contaminated sites awaiting the execution of an oversight document, such as a Memorandum of Agreement or Administrative Consent Order, or the availability of resources for a publicly funded action prior to assignment to a specific remedial bureau. Due to the longevity that some of these sites had in this status and the possibility that some of the pending environmental concerns may have been addressed through subsequent remedial activities, the Department started reevaluating the pending environmental issues against the site's remedial history and current conditions. This database serves a purpose similar to that of the federal Superfund Enterprise Management System (SEMS), functioning as a state-level counterpart for tracking potential hazardous substance release sites.

Includes GHG emissions data for facilities that emit or have emitted since 2010 chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. PFAS emissions data has been identified for facilities engaged in the following industrial processes: Aluminum Production (GHGRP Subpart F), HCFC-22 Production and HFC-23 Destruction (Subpart O), Electronics Manufacturing (Subpart I), Fluorinated Gas Production (Subpart L), Magnesium Production (Subpart T), Electrical Transmission and Distribution Equipment Use (Subpart DD), and Manufacture of Electric Transmission and Distribution Equipment (Subpart SS). Over time, other industrial processes with required GHGRP reporting may include PFAS emissions data and the list of reportable gases may change over time. Note that some regulatory programs have specified chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard.

PFOA/PFOS Contaminated Sites: PFAS NPL

This list of Superfund Sites with Per- and Polyfluoroalkyl Substances (PFAS) detections is made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data, previously the list was obtained by EPA FOIA requests. EPA's Office of Land and Emergency Management and EPA Regional Offices maintain what is known about site investigations, contamination, and remedial actions under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) where PFAS is present in the environment. Limitations: Detections of PFAS at National Priorities List (NPL) sites do not mean that people are at risk from PFAS, are exposed to PFAS, or that the site is the source of the PFAS. The information in the Superfund NPL and Superfund Alternative Agreement (SAA) PFAS detection site list is years old and may not be accurate today. Site information such as site name, site ID, and location has been confirmed for accuracy; however, PFAS-related information such as media sampled, drinking water being above the health advisory, or mitigation efforts has not been verified. For Federal Facilities data, the other Federal agencies (OFA) are the lead agency for their data and provided them to EPA.

Federal Agency Locations with Known or Suspected PFAS Detections: PFAS FED SITES

This list of federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS) is made available by the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools data. The EPA outlines that these data are gathered from several federal entities, such as the federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration (NASA), Department of Transportation (DOT), and Department of Energy (DOE). The dates this data was extracted for the PFAS Analytic Tools range from 2022 to 2024. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

SSEHRI PFAS Contamination Sites: PFAS SSEHRI

This PFAS Contamination Site Tracker database is compiled by the PFAS Project Lab, part of the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map by the PFAS-REACH team, credited to PFAS Project Lab, Silent Spring Institute, and PFAS Exchange. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: https://pfasproject.com/pfas-sites-and-community-resources/

National Response Center PFAS Spills: PFAS ERNS

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, is the designated federal point of contact for reporting all oil, chemical, and other discharges into the environment, for the United States and its territories. This dataset contains NRC spill information from 1990 to the present that is restricted to records associated with PFAS and PFAS-containing materials. Incidents are filtered to include only records with a "Material Involved" or "Incident Description" related to Aqueous Film Forming Foam (AFFF). The keywords used to filter the data included "AFFF," "Fire Fighting Foam," "Aqueous Film Forming Foam," "Fire Suppressant Foam, "PFAS," "PERFL," "PFOA," "PFOS," and "Genx." Limitations: The data from the NRC website contains initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

PFAS NPDES Discharge Monitoring: PFAS NPDES

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

This Per- and Poly-Fluoroalkyl Substances (PFAS) Environmental Media Sampling Data is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The Water Quality Portal (WQP), as a cooperative service sponsored by the United States Geological Survey, the EPA, and the National Water Quality Monitoring Council, is part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations, and individuals submit project details and sampling results to this public repository. Limitations: EPA did not carry out the sampling or testing of a majority of the data in the WQP PFAS dataset. EPA can only speak to the accuracy and completeness of the data from projects like the National Aquatic Resource Surveys for which EPA is the data owner/organization. Data may exist within the file on Quality Assurance Project Plans (QAPPs) and the approving agency of the QAPP, if a QAPP is entered.

PFAS TSCA Manufacture and Import Facilities: PFAS TSCA

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

PFAS Waste Transfers from RCRA e-Manifest: PFAS E-MANIFEST

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

PFAS Industry Sectors: PFAS IND

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

Toxic Substances Control Act: TSCA

The U.S. Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule. The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI). EPA CDR collections occur approximately every four years and reporting requirements change per collection.

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.
The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) database contains integrated enforcement and compliance information across most of U.S. Environmental Protection Agency's (EPA) programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained by the EPA Headquarters and at the Regional offices. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: CITY DIRECTORY RESEARCH
1463 & 1481 Kenwood Ave
Camden,NJ 08103

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

FEMA Flood Zone Definitions

Special Flood Hazard Areas – High Risk

Special Flood Hazard Areas represent the area subject to inundation by 1-percent-annual chance flood. Structures located within the SFHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory flood insurance purchase requirements apply in these zones.

ZONE	DESCRIPTION
A	Areas subject to inundation by the 1-percent-annual-chance flood event. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown.
AE, A1-A30	Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. BFEs are shown within these zones. (Zone AE is used on new and revised maps in place of Zones A1–A30.)
AH	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are 1–3 feet. BFEs derived from detailed hydraulic analyses are shown in this zone.
AO	Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are 1–3 feet. Average flood depths derived from detailed hydraulic analyses are shown within this zone.
AR	Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection.
A99	Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may be used only when the flood protection system has reached specified statutory progress toward completion. No BFEs or flood depths are shown.

Coastal High Hazard Areas – High Risk

Coastal High Hazard Areas (CHHA) represent the area subject to inundation by 1-percent-annual chance flood, extending from offshore to the inland limit of a primary front al dune along an open coast and any other area subject to high velocity wave action from storms or seismic sources. Structures located within the CHHA have a 26-percent chance of flooding during the life of a standard 30-year mortgage. Federal floodplain management regulations and mandatory purchase requirements apply in these zones.

ZONE	DESCRIPTION
V	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed coastal analyses have not been performed, no BFEs or flood depths are shown.
VE, V1-V30	Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. BFEs derived from detailed hydraulic coastal analyses are shown within these zones. (Zone VE is used on new and revised maps in place of Zones V1–V30.)

Hydrologic Information

Moderate and Minimal Risk Areas

Areas of moderate or minimal hazard are studied based upon the principal source of flood in the area. However, buildings in these zones could be flooded by severe, concentrated rainfall coupled with inadequate local drainage systems. Local stormwater drainage systems are not normally considered in a community's flood insurance study. The failure of a local drainage system can create areas of high flood risk within these zones. Flood insurance is available in participating communities, but is not required by regulation in these zones. Nearly 25-percent of all flood claims filed are for structures located within these zones.

ZONE	DESCRIPTION
B, X (shaded)	Moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. No BFEs or base flood depths are shown within these zones. (Zone X (shaded) is used on new and revised maps in place of Zone B.)
C, X (unshaded)	Minimal risk areas outside the 1-percent and .2-percent-annual-chance floodplains. No BFEs or base flood depths are shown within these zones. (Zone X (unshaded) is used on new and revised maps in place of Zone C.)

Undetermined Risk Areas

ZONE	DESCRIPTION
D	Unstudied areas where flood hazards are undetermined, but flooding is possible. No mandatory flood insurance purchase requirements apply, but coverage is available in participating communities.

Primary Rock Type:	Sand
Secondary Rock Type:	

Geologic Unit Kmv

Unit Name:	Merchantville Formation
Unit Age:	Upper Cretaceous, lower Campanian
Primary Rock Type:	Sand
Secondary Rock Type:	
Unit Description:	Sand, glauconite, locally has high quartz content, very clayey and silty, massive to thick-bedded, grayish-olive-green to dark-greenish-gray; weathers moderate brown or moderate yellow brown. Mica, feldspar, and pyrite are minor sand constituents. Very micaceous at base. Locally, has extensive iron incrustations in near-surface weathered beds. Fossil molds are mostly phosphatic. Fossils typically occur in siderite concretions. No calcareous fossils were found in outcrop. The Merchantville forms a continuous narrow to wide belt throughout the map area. The unit is about 6 m (20 ft) thick in the northern part of the central sheet, about 20 m (66 ft) thick in the Trenton area, and 12 to 15 m (39-49 ft) thick throughout the southern sheet. The formation is best exposed in the Trenton East quadrangle, mainly in the tributaries on the western side of Blacks Creek and south of Bordentown, Burlington County, where the entire thickness of the formation can be seen in gullies (Owens and Minard, 1964b). The basal contact with the underlying Magothy or Cheesequake Formations is sharp and disconformable. At most places, a reworked zone about 0.3 to 1 m (1-3 ft) thick is present at the base. This basal bed contains reworked lignitized wood, siderite concretions as much as 13 cm (5 in) in diameter, scattered pebbles and coarse-grained quartz sand and is burrowed. Most burrows project downward into the underlying formations. The Merchantville is the basal bed of a lower Campanian transgressive-regressive cycle that includes the overlying Woodbury and Englishtown Formations. Merchantville faunas were analyzed by Sohl (in Owens and others, 1977) who concluded that northern fauna represented deposition on a lower shoreface or in the transition to an inner shelf, whereas the southern fauna was a deeper water assemblage, probably inner shelf. Macrofossils occur as internal and external molds and include the ammonites Menabites (Delawarella) delawarensis and Scaphites (Scaphites) hippocrepis III. The Scaphites is of the type III variety of Cobban (1969) and is indicative of the lower, but not the lowest, Campanian. More recently, Kennedy and Cobban (1993), detailing the ammonite assemblage that includes Baculites haresi, Chesapeakella nodatum, Cryptotexanites paedomorphicus sp., Glyptoxoceras sp., Menabites (Delawarella) delawarensis, M. (Delawarella) vanuxemi, Menabites (Bererella) sp., Pachydiscus (Pachydiscus) sp., Placenticeras placenta, Pseudoscholenbachia cf. P. chispaensis, Scaphites (Scaphites) hippocrepis III, Submortoniceras punctatum, S. uddeni, and Texanites (Texanites) sp., concluded that the Merchantville is of late early Campanian age. Wolfe (1976) indicated that the Merchantville microflora was distinct from overlying and underlying units and designated it Zone CA2 of early Campanian age.

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

This list of drinking water violations and enforcement actions is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database, as part of the national download of Safe Drinking Water Act (SDWA) data. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program, including monitoring, enforcement, and violation data related to requirements established by the SWDA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

This national download of Safe Drinking Water Act (SDWA) data is sourced from the U.S Environmental Protection Agency's (EPA) Enforcement and Compliance History Online (ECHO) system that incorporates Public Water Systems data from EPA's Safe Drinking Water Information System (SDWIS) database. SDWIS contains information on public water systems from the Public Water System Supervision (PWSS) Program related to requirements established by the Safe Drinking Water Act (SDWA). Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey's (USGS) National Water Information System (NWIS) is the nation's principal repository of water resources data. The data includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data. This NWIS database information is obtained through the Water Quality Data Portal (WQP). The WQP

is a cooperative service sponsored by the USGS, the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC).

State Sources

Oil and Gas Wells **OGW**

As of NJ state regulatory agencies, FracTracker Alliance - state of New Jersey confirmed not to have any active (drilled but not plugged) oil and gas wells.

Public Community Water Supply Well Head Protection Areas **PCWS**

Locations of Well Head Protection Areas (WHPA) for Public Community Water Supply (PCWS) wells, created in compliance to the Safe Drinking Water Act Amendments of 1986 and 1996 as part of the Source Water Area Protection Program (SWAP). Well Head Protection Areas delineate the horizontal extent of ground water captured by a well. Data made available by New Jersey Department of Environmental Protection's (NJ DEP) Bureau of Safe Drinking Water. Point locations represent the centroids of the Well Head Protection Areas.

Well Permits **WATER WELLS**

Locations of water wells from the Well Permit Report made available by the State of New Jersey, Department of Environmental Protection. Includes approved/accepted well documents for Category 1 Potable and Category 2 Non-Potable Water Supply Wells.

SUPPORTING DOCUMENTATION

AREA 3

ASTM E1527-21 USER QUESTIONNAIRE

When the "user" (the party for whom the assessment is being prepared) of the Phase I is required to help the environmental professional identify recognized environmental conditions at the property, a "User Questionnaire" is completed by the user to help gather information that may identify recognized environmental conditions at the property.

We ask that you answer the six questions below to the best of your knowledge. We understand that, in some circumstances, you may have little or no information. Still, we encourage you to complete and return the questionnaire as soon as possible. This will allow us to reflect the fact that the Questionnaire was completed when we issue our report as is required. Completion of the assessment to the new standard, when conducted in connection with the asset purchase of a real property, may entitle the user to certain federal liability protections that result from conducting "All Appropriate Inquiries" into the previous ownership and uses of a property.

On the second page of this form is a list of documentation. The E1527-21 Standard requires that the User will ensure that the consultant is made aware that any of these materials exist for a site, and if so, that these documents be provided for the consultant's review. Please indicate whether any of these documents are available, and ensure that Environmental Services Company will either receive copies or be provided an opportunity to review the relevant materials.

We appreciate your assistance. If you have any questions, feel free to contact us.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   No

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   No

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   No

4. Does the purchase price/loan amount for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   Yes

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of specific chemicals that are present or once were present at the property? (c.) Do you know of spills or other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?

   No

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

   No

REPRESENTATIVE PROJECTS

PROJECT EXPERIENCE PRIOR TO PENNONI

Borough of Merchantville - Downtown Brownfields Redevelopment, Merchantville, NJ (2018)
Project Manager - Provided environmental services which included review of previous reports and data and preparation of a Remedial Investigation (RI) Workplan, remedial cost estimate, and Hazardous Discharge Site Remediation Fund (HDSRF) application related to the Merchantville Boro Downtown Brownfields Redevelopment project. Based on the initial review, site and remedial investigations (SI/RI) were required for several Areas of Concern (AOCs) including but not limited to inactive rail lines, chlorinated solvent groundwater contamination and vapor intrusion (VI). The HDSRF was approved in May 2018; however, prior to commencing the approved workplan, additional funds were requested to prepare an updated Preliminary Assessment (PA) and VI testing due to site and regulatory changes since the previous PA and investigations.

Blonder Tongue Laboratories, Inc. – Old Bridge, Middlesex, NJ (2018)
Project Manager - Provided LSRP oversight for the Industrial Site Recovery Act (ISRA) case which included preparing a Preliminary Assessment (PA) for the site in accordance with the New Jersey Department of Environmental Protection's (NJDEP) Technical Requirements for Site Remediation (NJAC 7:26E), ISRA (N.J.S.A. 13:1K and N.J.A.C. 7:26B), Administrative Requirements for the Remediation of Contaminated Sites (ARRCS) Rules (N.J.A.C. 7:26C) and applicable guidance. Based on the findings of the PA, site investigation (SI) activities were conducted to confirm / deny the presence of a release from a former hazardous waste storage area and other AOCs. Based on the SI findings, chlorinated groundwater contamination was identified requiring delineation and a VI study due to samples exceeding NJDEPs screening levels. Additional RI was conducted which delineated the vertical and horizontal limits of the plume and determined that VI is not a concern at the site based on a soil gas and indoor air investigation. On-going monitoring of the groundwater contamination was proposed in pursuit of a restricted-use Response Action Outcome (RAO) via monitored natural attenuation (MNA).

Laws & Laws – Cumberland County, Commercial Township, NJ (2017)
Project Manager - Provided LSRP oversight for the remediation of a former gasoline underground storage tank (UST) which was removed from the site but not properly closed. A review of the existing case file and NJDEP correspondence identified the need to investigate groundwater because of the prior removal action. The results of a groundwater investigation conducted in the vicinity of the former UST did not identify contaminants of concern above NJDEPs Ground Water Quality Standards (GWQS), as such, no further action was recommended for the UST and an unrestricted use Response Action Outcome (RAO) was issued for the AOC.

Fellowship House of South Camden – Camden, NJ (2017 – 2018)
Project Manager - Provided LSRP oversight for the site initially to attain Childcare Licensing for the site. The findings of the Preliminary Assessment identified multiple AOCs requiring further investigation. The results of Site and Remedial Investigations determined the site was underlain by historic fill requiring remediation. Due to the existing structure, site features and site use at the time, an Alternative Remedy was proposed for the capping of the site. The NJDEP reviewed and approved the proposed Alternative Remedies, and the remediation was completed via capping and institutional controls. Following issuance of a Remedial Action Permit (RAP) for Soil, a restricted use RAO for the entire site was issued by the LSRP.

Rafael Molina School – Mastery Charter Schools, Camden, NJ (2017 - 2018)
Project Manager - Provided LSRP oversight for the remediation of historic fill at the site. Due to the site use as a school, the on-going building addition and site features, an Alternative Remedy Proposal was prepared and submitted to the NJDEP to remediate historic fill. Upon NJDEP approval of the Alternative Remedy, the engineering caps were installed and documented in a deed restriction for the property in pursuit of a RAP for soil and restricted use RAO.

Camden Waterfront Redevelopment – Preliminary Assessment Report, Camden, NJ (2017 – 2018)
Project Manager - Supported the LSRP of Record in preparing the Preliminary Assessment Reports and remedial action estimates for the Camden Waterfront Redevelopment project which began in 2017 and is currently under construction. The site was formerly occupied by multiple industrial properties from before the turn of the century until the 1990's. Former occupants included the former Ferry Terminal, Campbells Food, lumber yards but mostly consisted of former Radio Corporation of America (RCA) operations during the second half of the 19th century. Prior to the most recent redevelopment, the site was utilized for parking lots to support the nearby attractions. The findings of the PA and subsequent reports identified multiple AOCs requiring additional investigation/remediation, the results of which documented the presence of PCB laden historic fill material, historic fill, chlorinated solvent groundwater contamination, and a "discharge pit" contaminated with chlorinated volatiles and PCBs. Subsequent remedial excavations and chemical / biological amendment injections were conducted to remediate the former discharge pit concurrent with the project build-out. Currently, the site is undergoing redevelopment and engineering control installations as part of the remedial actions. On-going monitoring and maintenance will be conducted to ensure the protectiveness of the remediation.

Lakeside Business Park LLC - 2 Independence Boulevard, Gloucester County, NJ (2017)
Project Manager - provided LSRP services which included preparation of a PA that identified two AOCs, fill material and historic agricultural use, in connection with the site. Based on the PA findings, the site was historically agricultural land until it was operated by a local mine adjacent to the site. Test pits and soil borings were advanced for sample collection to characterize suspect fill material and historically applied pesticides in accordance with NJAC 7:26E and guidance. Analytical results did not identify the presence of targeted compounds at concentrations above NJDEP soil remediation standards as such, a due diligence entire site unrestricted use RAO was issued for the site.

Weequahic Park – Department of Parks, Essex County, NJ (2011)
Project Manager - Provided environmental services that included the completion of an environmental Preliminary Assessment (PA) for the County of Essex's Weequahic Park. The PA was completed in accordance with the New Jersey Department of Environmental Protection's (NJDEP) Technical Requirements for Site Remediation (NJAC 7:26E) and submitted to the NJDEP Green Acres Program for funding. The PA was requested by Green Acres as part of a due diligence effort for the property. The PA included a comprehensive evaluation of the historic site operations, an ownership history, a review of reasonably available environmental files/maps/data, and a review of third-party regulatory database to determine whether AOCs were present at the site.

Branchbrook Park –Department of Parks, Essex County, NJ (2010)
Project Manager - Provided environmental services that included the completion of an environmental Preliminary Assessment (PA) for the County of Essex's Weequahic Park. The PA was completed in accordance with the New Jersey Department of Environmental Protection's (NJDEP) Technical Requirements for Site Remediation (NJAC 7:26E) and submitted to the NJDEP Green Acres Program for funding. The PA was requested by Green Acres as part of a due diligence effort for the property. The PA included a comprehensive evaluation of the current and historic site operations, an ownership history, a review of reasonably available environmental files/maps/data, and a review of third-party regulatory database to determine whether AOCs were present at the site. Additional investigation of site AOCs including historic fill was subsequently conducted based on the PA findings.

PREVIOUS PROJECT EXPERIENCE AT PENNONI FROM JANUARY 2007 TO OCTOBER 2017

Former Pharmaceutical Manufacturing Facility – Remedial Investigation, Bergen County, NJ (2014)
Environmental Scientist - Conducted the remedial investigation of a former pharmaceutical manufacturing site in Bergen County, NJ. The site has operated in the manufacture of fine chemicals and pharmaceutical intermediates since the turn of the century until 2011. Two active ISRA cases are associated with the property with an extensive case history. Mr. Zjawin assisted the LSRP in evaluating the results of previous investigations and historic documents to determine the investigations and regulatory actions necessary for ISRA compliance. The investigation and remediation of select AOCs was conducted by other consultants between 1999-2012 which identified 89 AOCs about the site. AOCs included an open terracotta piping system, wastewater treatment systems, former and active USTs /ASTs, storage areas, production rooms, suspect disposal areas, and groundwater contamination. Additional investigations were conducted by Pennoni that demonstrated delineation of contaminants of concern (COCs) in soil and groundwater. Remedial actions are proposed to remediate a No.6 fuel oil spill prior to implementation of a presumptive remedy and the issuance of an RAO for the industrial establishment. The site structures were demolished in 2015 and the site is slated for redevelopment into a multistory condominium and community park.

Remedial Investigation/Remedial Action Work plan (Brownfield), Camden, NJ (2013)
Environmental Scientist - Prepared a RAWP and Permit applications for the proposed in-situ treatment of a chlorinated solvent groundwater plume originating from an underground vault and other sources. The RAWP proposed off-site delineation of the plume and investigation of a former AST prior to implementation of the in-situ treatment. Previous remedial activities included source removal, chemical injections, and installation of a slurry wall. A negative pressure vapor mitigation system was installed under a portion of the building and is effective in remediating vapor intrusion. Responsibilities included assisting in the design of additional soil and groundwater remedial investigations and the remedial action selection to treat the groundwater contamination.

Publicly Traded Insurance Comp. - Due Diligence/Cost Evaluation, Sites, NJ, CT, & PA (2013)
Environmental Scientist - Provided pre-foreclosure due diligence and risk evaluation of seven industrial and commercial properties for a mutual life-insurance company based in New York City. The project included evaluating sites with significant environmental history and consulting with the Asset Management Team and general counsel. We provided ASTM Phase I's, Preliminary Assessment Reports, and letter reports summarizing remediation cost estimates and regulatory requirements for each of the sites. Regulatory involvement with the properties included state agencies from New Jersey (Industrial Site Remediation Act), Connecticut (Property Transfer Program), and Pennsylvania (Act II). Pennoni continues to work with the client providing consulting services for property transactions in the northeast.

Former Automotive Service/Sales – Preliminary Assessment, Remedial Investigation, &, Union City, NJ (10/12 – 3/13)
Environmental Scientist - Retained to conduct due diligence and the subsequent remediation prior to the transfer of the property. The site operated between the 1930's and 2012 as an automotive sales and service center. The results of the Preliminary Assessment identified three hydraulic lifts requiring additional investigation. During remediation activities, impacted soils were observed in one of the three excavations emanating from a previously unknown UST. Impacted soils were stockpiled, characterized, and properly disposed of off-site. Prior to backfill, post-excavation soil samples were collected and analyzed in accordance with NJDEP regulations and guidance. It was determined that based on the hydrogeological attributes of the underlying formation and evaluation of site data, PAH contamination detected in one post-excavation sample was determined to be limited due to the presence of bedrock on the sidewalls and bottom of the excavation. Furthermore, utilizing compliance averaging, the calculated

average was determined to be below the NJDEP residential soil standard. Based on the results of the investigations, no further action was recommended, and an unrestricted use site-wide RAO was issued by the LSRP.

Seafood Processing Plant – Active Remediation of No. 6 Fuel Oil Release, Cape May, NJ (1/10 – 10/15)
Project Manager, client contact, and Operations/Maintenance Coordinator - Retained to remediate a fuel oil spill that migrated beneath a 65,000-square foot seafood processing plant in Cape May, NJ. A multi-phase extraction (MPX) system was designed to treat free product, soil vapor, and dissolved groundwater contamination with minimal disruptions to site operations. Following three years of active remediation, remedial investigations identified a soil "hot spot" that was subsequently excavated. Post-remediation sampling results confirmed the MPX system successfully remediated extractable petroleum hydrocarbons (EPH) in soil, free product to intermittent occurrences, and decreasing groundwater contaminant trends. Following shutdown, the results of groundwater monitoring and well gauging have indicated the remediation was successful in the reduction of source mass below the site and concentrations of dissolve groundwater contamination. Pennoni is currently preparing the remedial action report and remedial action permit applications in pursuit of a restricted use Response Action Outcome (RAO).

Proposed Daycare - Due Diligence, Phase II and Alternative Analysis, Netcong, NJ (2009)
Associate Scientist - Investigated geotechnical and environmental conditions associated with fill dumped on their property from the adjoining property. Designed a retaining wall that allows the construction of the daycare facility with a useable rear yard; and studied the costs associated with alternatives which would allow the construction of the proposed daycare center to continue. The fill area was delineated utilizing aerial photographs, historic topographic maps, and digital ortho-photography and prior to investigations the property and fill boundary were surveyed and marked. Following due diligence, Pennoni oversaw a test pit investigation of the fill material that identified PCBs and PAHs more than the NJDEP residential soil standards. The results of the investigation successfully delineated the extent of fill material and characterized the contaminants of concern associated with the fill. In addition to the Site Investigation, a Preliminary Assessment (PA) was prepared for the Client in accordance with the Technical Requirements for Site Remediation (N.J.A.C. 7:26E) to establish the site's environmental conditions. The PA identified the fill material as an AOC about the site. Mr. Zjawin conducted field investigations and prepared the PA.

USEPA Superfund Site - Hexavalent Chrome Soil Remedial Action, Clarks Summit, PA (10/05 - 11/06)
Site Manager – Responsible for remedial action of impacted soils and groundwater at a 45-acre USEPA Superfund Site in Pennsylvania. Identified areas of soil contamination were designated into 5-, 10- & 15-foot grids for injection of calcium polysulfide to remediate the hexavalent chromium in soils. The injection points were determined based on depth of contamination and porosity of soils. Duties included coordinating day to day remediation activities between contractors, EPA, PADEP and the client, daily health and safety meetings, oversight of perimeter air monitoring data, data collection of injection volumes and points, liaison to local residences, collecting over 60 post-remediation samples, and operations and maintenance of two wastewater treatment systems. Other duties included oversight of installation of injection points, quarterly groundwater sampling, and weekly drinking water sampling of local residences.

Perth Amboy Housing Authority - Former Middlesex County Vocational Technical School, Perth Amboy, NJ
Environmental Scientist - Conducted the oversight of the abatement of hazardous materials from within the technical school building, oversee the demolition and cut/fill operations, as well as oversee the removal of hydraulic lifts and a UST. The site was impacted with historic fill and a release from a waste oil UST. Following additional RI and groundwater investigations, a restricted use NFA was granted with monitoring requirements of the engineering controls.

Andover County - Preliminary Assessment, Andover, NJ
Environmental Scientist - Conducted a Preliminary Assessment (PA)/Site Investigation (SI) of a County owned maintenance garage and fueling facility with known sources of contamination to establish the site's environmental conditions and identify the source of chlorinated solvents impacting site groundwater. The PA involved a review of historical documents, local and state document review and a site visit. The PA identified 36 AOCs about the property. The PA identified the parts washing equipment, floor drain, and septic system as the potential source of chlorinated solvents impacting the subject property.

Lead field technician - Completed remedial investigations for an apartment complex in Newark, New Jersey that was impacted by a #6 oil spill associated with two former 15,000-gallon USTs. To date, approximately 40 soil borings have been advanced, eight monitoring wells have been installed, and eight soil gas probes have been sampled. Soil contamination, groundwater contamination and free phase product are observed to be virtually site wide. In addition, the potential for vapor intrusion is present. Upon completion of the remedial investigations, a Remedial Action Work plan will be prepared to address each impacted medium.

Lead field technician – Responsible for the remedial investigation of impacted soil and groundwater associated with an out of service heating oil UST in Collingswood, NJ. Based on the results of the remedial investigations, it was evident that the UST had impacted soil and groundwater on the subject property and an adjacent property. Conducted oversight of the installation of monitoring wells and injection wells for an in-situ chemical oxidation injection program to be implemented on the subject and adjacent properties to remediate the impacted soil and groundwater.

Town of Andover - Preliminary Assessment, Andover, NJ

Preliminary Assessment/Site Investigation, Netcong, NJ
Environmental Scientist - Conducted a Site Investigation of suspected fill material placed on the subject property by an adjacent property owner. A total of five test pits were installed and eleven soil samples were collected and analyzed. The results of the soil sampling revealed that the soils are in fact non-native fill material and are impacted with PCBs and PAHs. In addition to the Site Investigation, a Preliminary Assessment (PA) was conducted in accordance with the Technical Requirements for Site Remediation (N.J.A.C. 7:26E) to establish the site's environmental conditions. The PA involved a review of historical documents, local and state document review and a site visit. The PA identified the fill material as an AOC about the property. Remedial investigation is proposed for the fill material.

PRINCESS AVENUE AND WALNUT STREET

BAIRD BOULEVARD AND KENWOOD AVENUE

The pre-developed stormwater runoff from each site drains to the existing stormwater infrastructure located in Princess Avenue, Walnut Street, Baird Boulevard and Kenwood Avenue.

The pre-developed hydrograph calculations are included as Appendix A.

Proposed Conditions

The Applicant is proposing the development / redevelopment of fourteen (14) townhomes on Block 365, Lots 6; Block 1286, Lots 7, 8, 49, 53 and 54; Block 1274, Lot 14 and Block 1299, Lots 25 and 30, located along Princess Avenue, Walnut Street, Baird Boulevard and Kenwood Avenue.

The post-developed stormwater runoff from each site drains to the existing stormwater infrastructure located in Princess Avenue, Walnut Street, Baird Boulevard and Kenwood Avenue.

The post-developed hydrograph calculations are included as Appendix B.

3.0 Soils

The Natural Resources Conservation Service (NRCS) Soil Survey was reviewed for the site. The soils in the location of the Princess Avenue and Walnut Street sites is Urban land – Northmont complex (URnB), 0 to 5 percent slopes, interpretive group Type D soils; the soils in the location of the Baird Boulevard and Kenwood Avenue sites is Urban land – Cramerhill complex (URgB), 0 to 5 percent slopes, interpretive group Type C soils; The NRCS Soil Survey maps are provided as Figure 6.

4.0 Watershed Area

Based on a review of FEMA Flood Insurance Rate Maps, and NJ GeoWeb, we have made the following determinations for waterways near the project limits:

FEMA FIRM panel number 34007C0036F (effective August 17, 2016) (Figures 9-8) indicates the immediate project areas are not located within a designated flood area.

5.0 Nonstructural Measures

Nonstructural measures employed in the engineering of this site include.

1. Protect areas that provide water quality benefits or areas particularly susceptible to erosion of sediment loss.
   - Construction of the project will comply with the Soil Erosion and Sediment Control Act, NJSA 4:24-39 et seq. and implementing rules.
2. Minimize land disturbance including clearing and grading.
   - Land disturbance has been minimized to the extent practical.
3. Minimize soil compaction.
   - Light construction equipment will be utilized to minimize soil compaction.

6.0 Requirements for Stormwater Management

As required by N.J.A.C. 7:8-1.6, all "major development" shall comply with the requirements of N.J.A.C. 7:8 Stormwater Management Rules. A "Major development" means an individual "development," as well as multiple developments that individually or collectively result in:

1. The disturbance of one or more acres of land since February 2, 2004;
2. The creation of one-quarter acre or more of "regulated impervious surface" since February 2, 2004;
3. The creation of one-quarter acre or more of "regulated motor vehicle surface" since March 2, 2021; or
4. A combination of 2 and 3 above totals an area of one-quarter acre or more. The same surface shall not be counted twice when determining if the combination area equals one-quarter acre or more.

Major development includes all developments that are part of a common plan of development, or sale (for example, phased residential development) that collectively or individually meet one or more paragraphs 1, 2, 3, or 4 above. Projects undertaken by any government agency that otherwise meet the definition of "major development", but which do not require approval under the Municipal Land Use Law, N.J.S.A. 40:55D-1 et seq., are also considered "major development."

The stormwater management rules at N.J.A.C. 7:8 apply to the project site, as the site meets the definition for a major development based on the following:

1. **Total disturbance for all lots is less than one acre (Total = 27,825 sf / 0.64 ac.).**
2. **Most of the townhomes/buildings were demolished more than five years immediately prior to the time of this application; therefore, the overall project will create more than one-quarter acre of regulated impervious surface consisting mainly of building areas and will be subject to the stormwater management rules at N.J.A.C. 7:8. A variance is requested for runoff quantity.**
3. **Total creation of "regulated" motor vehicle surface since March 2021 is less than one-quarter acre (4,668 sf / 0.11 ac.) .**

7.0 Techniques of Analysis

In accordance with the stormwater runoff calculation methodology at N.J.A.C. 7:8-5.6, the quantity (volume and rate) of stormwater runoff for pre-and post-developed conditions is calculated based on the USDA NRCS methodology as described in NRCS National Engineering Handbook, Part 630.

Pre- and post-developed times of concentration (TC) are determined using the hydraulically longest flow path.

The developed area is made up of Urban Land, interpretive group Type D soils. CNs 84 for lawn/landscaped areas in fair condition, 98 for impervious areas have been utilized in the calculations.

The impervious areas were calculated as separate subareas to generate hydrographs without weighted CNs as outlined in the CMP N.J.A.C. 7:50-6.84(a) 6.i (2) and the BMP manual chapter 5.

Using the drainage areas, the TCs and CNs as input data, Pond Pack Connect Edition, a hydrologic/hydraulic software program by Bentley, was utilized to generate runoff rates and volumes.

8.0 Key Hydrologic Principals

A 24-hour, NOAA _C (Region C) storm distribution and the DelMarVa unit hydrograph was utilized with the following rainfall amounts, within Camden County for each storm analyzed (reference Appendix G). Precipitation adjustment factors are included in the precipitation depths below.

Current Year Rainfall Intensities		Projected Rainfall Intensities (Year 2100)	
2 year	3.41 inches	2 year	3.91 inches
10 year	5.26 inches	10 year	6.17 inches
25 year	6.53 inches	25 year	7.70 inches
100 year	8.95 inches	100 year	11.84 inches

9.0 Stormwater Design

Groundwater Recharge

Pursuant to the N.J.A.C. 7:8-5.4 (b), groundwater recharge requirements apply if there is either a 0.25 acre increase in the impervious area or 1 acre of disturbance. The project disturbs more than 1 acre and increases motor vehicle surfaces by more than 0.25 acres. Therefore, one of the following requirements shall be met to satisfy the standards for groundwater recharge: (1) 100 percent of the site's average annual pre-developed groundwater recharge volume shall be maintained after development; (2) 100 percent of the difference between the site's pre- and post-developed 2-year runoff volumes shall be infiltrated.

According to the New Jersey State Development and Redevelopment Plan, the sites are within a previously developed designated Urban Center. Groundwater recharge is not required within an "Metropolitan Planning Area PA1" pursuant to N.J.A.C. 7:8-5.4(b)2 (Appendix C, Supporting Documentation). Therefore, groundwater recharge was not evaluated for this project.

Runoff Quality

Pursuant to N.J.A.C. 7:8-5.2 (f), the green infrastructure BMP's can be utilized to satisfy the requirements of N.J.A.C. 7:8-5.5 for stormwater runoff quality. Stormwater Management measures shall be designed to reduce the post-construction load of total suspended solids (TSS) in stormwater runoff generated from the water quality design storm by 80 percent of the anticipated load from the developed site. The increase in motor vehicle surfaces, must be treated for 80% TSS reductions.

The water quality (WQ) design storm is 1.25 inches of rainfall in 2-hours. In accordance with N.J.A.C. 7:8-5.5, Table 5-4, a one-minute water quality design storm rainfall distribution was utilized for the calculations.

The water quality standards only apply if there is a net increase of 0.25 acres or more of motor vehicle surfaces. The project will not create a net increase of 0.25 acres or more of motor vehicle surfaces, therefore water quality is not required.

Runoff Quantity

Post-construction runoff hydrographs for the 2, 10 and 100-year have been analyzed as part of stormwater management design. Pursuant to N.J.A.C. 7:8-5.6(b)one of the following peak runoff requirements must be met: (1) demonstrate that the post development hydrograph is less than the pre-development hydrograph at all points during 2, 10 and 100 year storm events; (2) demonstrate that the there is no increase in peak runoff rates of stormwater leaving the site for the 2, 10 and 100 year storm events and that the increased volume or change in timing of stormwater runoff will not increase flood damage at or downstream of the site.; or (3) reduce the post-development peak discharge for the 2, 10, and 100-year storm events to release 50%, 75% and 80%, respectively as a result of the proposed development.

Most of the townhomes/buildings were demolished more than five years immediately prior to this application; therefore, the overall project will create more than one-quarter acre of regulated impervious surface consisting mainly of building areas and will be subject to the stormwater management rules at N.J.A.C. 7:8. A variance is requested for runoff quantity as increases are negligible.

An Impervious Area Summary for Block 365, Lots 6; Block 1286, Lots 7, 8, 49, 53 and 54; Block 1274, Lot 14 and Block 1299, Lots 25 and 30, is provided in Appendix C. The summary provides a breakdown of the impervious coverage per lot under the current condition, proposed conditions and conditions prior to demolition. Note that the existing stormwater infrastructure was in place prior to demolition.

10.0 Storm Sewer Design

The properties are located along paved City streets which contain existing stormwater infrastructure. The properties were previously developed, and the proposed development will not have an impact on the existing stormwater infrastructure.

11.0 Soil Erosion and Sediment Control

The project will comply with the minimum design and performance standards for erosion control established under the Soil Erosion and Sediment Control Act, N.J.S.A. 4:24-39 et seq. and implementing rules. Anticipated BMP's to be included in the Soil Erosion and Sediment Control Plan will include, structural and non-structural soil erosion BMP's to be implemented during construction, including: minimizing the area of disturbance, placement of silt fencing around the limit of disturbance, temporary soil stockpiles surrounded with silt fencing, temporary vegetative cover standards, inlet filter covers over all existing and proposed stormwater inlets, and an anti-tracking stabilized construction entrance (see Dwg. CS8001). The project will be submitted to the Camden County Conservation District for certification of a Soil Erosion and Sediment Control Plan prior to commencement of construction.

12.0 Conclusion

Pursuant to N.J.A.C. 7:8-5, the proposed stormwater management system has been designed such that:

- Most of the townhomes/buildings were demolished more than five years immediately prior to the time of this application; therefore, the overall project will create more than one-quarter acre of regulated impervious surface consisting mainly of building areas. A variance is requested for runoff quantity.
- The project will create a net increase of 0.11 acres of motor vehicle surface. Therefore, water quality measures are not required.
- The project is located within a previously developed area, Metropolitan Planning Area PA1, and therefore, pursuant to N.J.A.C. 7:8-5.4(b)2 the groundwater recharge requirement does not apply.

Notes: The average point rainfall amounts listed above were developed from data contained in NOAA Atlas 14 Volume 2.

Point rainfall estimates for specific locations may be obtained from the Precipitation Frequency Data Server located at http://www.nws.noaa.gov/ohd/hdsc/

For most hydrologic design procedures, the rainfall amounts listed above may be rounded to the nearest tenth of an inch.

b. N.J.A.C.7:8-5.7(c) requires the precipitation depths of the current 2-, 10- and 100-year storm events be determined by multiplying the NOAA rainfall data with the current precipitation adjustment factors in Table 5-5 at N.J.A.C.7:8-5.7(c)2. N.J.A.C.7:8-5.7(d) requires the precipitation depths of the projected 2-, 10- and 100-year storm events be determined by multiplying the NOAA rainfall data with the future precipitation change factors in Table 5-6 at N.J.A.C.7:8-5.7(d). Table 5-5 and Table 5-6 from the Rules are reproduced below.

SOIL EROSION AND SEDIMENTATION CONTROL NOTES:

1. ALL APPLICABLE EROSION AND SEDIMENT CONTROL PRACTICES SHALL BE IN PLACE PRIOR TO ANY GRADING OPERATION AND/OR INSTALLATION OF PROPOSED STRUCTURES OR UTILITIES.
2. SOIL EROSION AND SEDIMENT CONTROL PRACTICES ON THIS PLAN SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARDS FOR SOIL EROSION AND SEDIMENT CONTROL IN NEW JERSEY.
3. APPLICABLE EROSION AND SEDIMENT CONTROL PRACTICES SHALL BE LEFT IN PLACE UNTIL CONSTRUCTION IS COMPLETED AND/OR THE AREA IS STABILIZED.
4. THE CONTRACTOR SHALL PERFORM ALL WORK, FURNISH ALL MATERIALS AND INSTALL ALL MEASURES REQUIRED TO REASONABLY CONTROL SOIL EROSION RESULTING FROM CONSTRUCTION OPERATIONS AND PREVENT EXCESSIVE FLOW OF SEDIMENT FROM THE CONSTRUCTION SITE.
5. ANY DISTURBED AREA THAT IS TO BE LEFT EXPOSED FOR MORE THAN THIRTY (30) DAYS AND NOT SUBJECT TO CONSTRUCTION TRAFFIC SHALL IMMEDIATELY RECEIVE A TEMPORARY SEEDING AND FERTILIZATION IN ACCORDANCE WITH THE NEW JERSEY STANDARDS AND THEIR RATES SHOULD BE INCLUDED IN THE NARRATIVE. IF THE SEASON PROHIBITS TEMPORARY SEEDING, THE DISTURBED AREAS WILL BE MULCHED WITH SALT HAY OR EQUIVALENT AND ANCHORED IN ACCORDANCE WITH THE NEW JERSEY STANDARDS (I.E. PEG AND TWINE, MULCH NETTING OR LIQUID MULCH BINDER).
6. IT SHALL BE THE RESPONSIBILITY OF THE DEVELOPER TO PROVIDE CONFIRMATION OF LIME, FERTILIZER AND SEED APPLICATION AND RATES OF APPLICATION AT THE REQUEST OF THE CAMDEN SOIL CONSERVATION DISTRICT.
7. ALL CRITICAL AREAS SUBJECT TO EROSION WILL RECEIVE A TEMPORARY SEEDING IN COMBINATION WITH STRAW MULCH AT A RATE OF 2 TONS PER ACRE ACCORDING TO THE NEW JERSEY STANDARDS IMMEDIATELY FOLLOWING ROUGH GRADING.
8. THE SITE SHALL AT ALL TIMES BE GRADED AND MAINTAINED SUCH THAT ALL STORMWATER RUNOFF IS DIVERTED TO SOIL EROSION AND SEDIMENT CONTROL FACILITIES.
9. ALL SEDIMENTATION STRUCTURES WILL BE INSPECTED AND MAINTAINED ON A REGULAR BASIS AND AFTER EVERY STORM EVENT.
10. A CRUSHED STONE, TIRE CLEANING PAD WILL BE INSTALLED WHEREVER A CONSTRUCTION ACCESS EXISTS. THE STABILIZED PAD WILL BE INSTALLED ACCORDING TO THE STANDARD FOR STABILIZED CONSTRUCTION ACCESS.
11. ALL DRIVEWAYS MUST BE STABILIZED WITH 2½" CRUSHED STONE OR SUBBASE PRIOR TO INDIVIDUAL LOT CONSTRUCTION.
12. PAVED AREAS MUST BE KEPT CLEAN AT ALL TIMES.
13. ALL CATCH BASIN INLETS WILL BE PROTECTED ACCORDING TO THE CERTIFIED PLAN.
14. ALL STORM DRAINAGE OUTLETS WILL BE STABILIZED, AS REQUIRED BEFORE THE DISCHARGE POINTS BECOME OPERATIONAL.
15. ALL DEWATERING OPERATIONS MUST DISCHARGE DIRECTLY INTO A SEDIMENT FILTER AREA. THE SEDIMENT FILTER SHOULD BE COMPOSED OF A SUITABLE SEDIMENT FILTER FABRIC. (SEE DETAIL). THE BASIN MUST BE DEWATERED TO NORMAL POOL WITHIN 10 DAYS OF THE DESIGN STORM.
16. NJSA 4:24-39, ET SEQ. REQUIRES THAT NO CERTIFICATE OF OCCUPANCY BE ISSUED BEFORE ALL PROVISIONS OF THE CERTIFIED SOIL EROSION AND SEDIMENT CONTROL PLAN HAVE BEEN COMPLIED WITH FOR PERMANENT MEASURES. ALL SITE WORK FOR THE PROJECT MUST BE COMPLETED PRIOR TO THE DISTRICT ISSUING A REPORT OF COMPLIANCE A PREREQUISITE TO THE ISSUANCE OF A CERTIFICATE OF OCCUPANCY BY THE MUNICIPALITY.
17. MULCHING IS REQUIRED ON ALL SEEDED AREAS TO INSURE AGAINST EROSION BEFORE GRASS IS ESTABLISHED TO PROMOTE EARLIER VEGETATION COVER.
18. OFFSITE SEDIMENT DISTURBANCE MAY REQUIRE ADDITIONAL CONTROL MEASURES TO BE DETERMINED BY THE EROSION CONTROL INSPECTOR.
19. A COPY OF THE CERTIFIED SOIL EROSION AND SEDIMENT CONTROL PLAN MUST BE MAINTAINED ON THE PROJECT SITE DURING CONSTRUCTION.
20. THE CAMDEN SOIL CONSERVATION DISTRICT SHALL BE NOTIFIED 72 HOURS PRIOR TO ANY LAND DISTURBANCE.
21. ANY CONVEYANCE OF THIS PROJECT PRIOR TO ITS COMPLETION WILL TRANSFER FULL RESPONSIBILITY FOR COMPLIANCE WITH THE CERTIFIED PLAN TO ANY SUBSEQUENT OWNERS.
22. IMMEDIATELY AFTER THE COMPLETION OF STRIPPING AND STOCKPILING OF TOPSOIL, THE STOCKPILE MUST BE STABILIZED ACCORDING TO THE STANDARD FOR TEMPORARY VEGETATIVE COVER. STABILIZE TOPSOIL STOCKPILE WITH STRAW MULCH FOR PROTECTION IF THE SEASON DOES NOT PERMIT THE APPLICATION AND ESTABLISHMENT OF TEMPORARY SEEDING. ALL SOIL STOCKPILES ARE NOT TO BE LOCATED WITHIN FIFTY (50) FEET OF A FLOODPLAIN, SLOPE, ROADWAY OR DRAINAGE FACILITY AND THE BASE MUST BE PROTECTED WITH A SEDIMENT BARRIER.
23. ANY CHANGES TO THE SITE PLAN WILL REQUIRE THE SUBMISSION OF A REVISED SOIL EROSION AND SEDIMENT CONTROL PLAN TO THE CAMDEN SOIL CONSERVATION DISTRICT. THE REVISED PLAN MUST BE IN ACCORDANCE WITH THE CURRENT NEW JERSEY STANDARDS FOR SOIL EROSION AND SEDIMENT CONTROL.
24. METHODS FOR THE MANAGEMENT OF HIGH ACID PRODUCING SOILS SHALL BE IN ACCORDANCE WITH THE STANDARDS. HIGH ACID PRODUCING SOILS ARE THOSE FOUND TO CONTAIN IRON SULFIDES OR HAVE A PH OF 4 OR LESS.

STANDARD FOR TEMPORARY VEGETATIVE COVER FOR SOIL STABILIZATION:

DEFINITION
ESTABLISHMENT OF TEMPORARY VEGETATIVE COVER ON SOILS EXPOSED FOR PERIODS OF TWO TO 6 MONTHS WHICH ARE NOT BEING GRADED, NOT UNDER ACTIVE CONSTRUCTION OR NOT SCHEDULED FOR PERMANENT SEEDING WITHIN 60 DAYS.

PURPOSE
TO TEMPORARILY STABILIZE THE SOIL AND REDUCE DAMAGE FROM WIND AND WATER EROSION UNTIL PERMANENT STABILIZATION IS ACCOMPLISHED.

WATER QUALITY ENHANCEMENT
PROVIDES TEMPORARY PROTECTION AGAINST THE IMPACTS OF WIND AND RAIN, SLOWS THE OVERLAND MOVEMENT OF STORMWATER RUNOFF, INCREASES INFILTRATION AND RETAINS SOIL AND NUTRIENTS ON SITE, PROTECTING STREAMS OR OTHER STORMWATER CONVEYANCES.

WHERE APPLICABLE
ON EXPOSED SOILS THAT HAVE THE POTENTIAL FOR CAUSING OFF-SITE ENVIRONMENTAL DAMAGE.

METHODS AND MATERIALS

1. SITE PREPARATION
A. GRADE AS NEEDED AND FEASIBLE TO PERMIT THE USE OF CONVENTIONAL EQUIPMENT FOR SEEDBED PREPARATION, SEEDING, MULCH APPLICATION, AND MULCH ANCHORING. ALL GRADING SHOULD BE DONE IN ACCORDANCE WITH STANDARDS FOR LAND GRADING, P. 19-1.

B. INSTALL NEEDED EROSION CONTROL PRACTICES OR FACILITIES SUCH AS DIVERSIONS, GRADE STABILIZATION STRUCTURES, CHANNEL STABILIZATION MEASURES, SEDIMENT BASINS, AND WATERWAYS. SEE STANDARDS 11 THROUGH 42.

C. IMMEDIATELY PRIOR TO SEEDING, THE SURFACE SHOULD BE SCARIFIED 6" TO 12" WHERE THERE HAS BEEN SOIL COMPACTION. THIS PRACTICE IS PERMISSIBLE ONLY WHERE THERE IS NO DANGER TO UNDERGROUND UTILITIES (CABLES, IRRIGATION SYSTEMS, ETC.).

2. SEEDBED PREPARATION
A. APPLY GROUND LIMESTONE AND FERTILIZER ACCORDING TO SOIL TEST RECOMMENDATIONS SUCH AS THOSE OFFERED BY RUTGERS COOPERATIVE EXTENSION. SOIL SAMPLE MAILERS ARE AVAILABLE FROM THE LOCAL RUTGERS CO-OPERATIVE EXTENSION OFFICES. FERTILIZER SHALL BE APPLIED AT THE RATE OF 500 PONDS PER ACRE OR 11 POUNDS PER 1,000 SQUARE FEET OF 10-20-10 OR EQUIVALENT WITH 50% WATER INSOLUBLE NITROGEN UNLESS A SOIL TEST INDICATES OTHERWISE. APPLY LIMESTONE AT THE RATE OF 2 TONS/ACRE UNLESS SOIL TEST INDICATES OTHERWISE. CALCIUM CARBONATE IS THE EQUIVALENT AND STANDARD FOR MEASURING THE ABILITY OF LIMING MATERIALS TO NEUTRALIZE SOIL ACIDITY AND SUPPLY CALCIUM AND MAGNESIUM TO GRASSES AND LEGUMES. TABLE BELOW IS A GENERAL GUIDELINE FOR LIMESTONE APPLICATION.

SOIL TEXTURE	TONS/ACRE	LBS./1,000 S.F.
CLAY, CLAY LOAM, AND HIGH ORGANIC SOIL	3	135
SANDY LOAM, LOAM, SILT LOAM	2	90
LOAMY SAND, SAND	1	45

PULVERIZED DOLOMITIC LIMESTONE IS PREFERRED FOR MOST SOILS SOUTH OF THE NEW BRUNSWICK-TRENTON LINE.

B. WORK LIME AND FERTILIZER INTO THE SOIL AS NEARLY AS PRACTICAL TO A DEPTH OF 4 INCHES WITH A DISC, SPRINGTOOTH HARROW, OR OTHER SUITABLE EQUIPMENT. THE FINAL HARROWING OR DISCING OPERATION SHOULD BE ON THE GENERAL CONTOUR. CONTINUE TILLAGE UNTIL A REASONABLY UNIFORM SEEDBED IS PREPARED.

C. INSPECT SEEDBED JUST BEFORE SEEDING. IF TRAFFIC HAS LEFT THE SOIL COMPACTED, THE AREA MUST BE RETILLED AS ABOVE.

D. SOILS HIGH ON SULFIDES OR HAVING A PH OF 4 OR LESS REFER TO STANDARD FOR MANAGEMENT OF HIGH ACID PRODUCING SOILS, PG. 1-1 OF THE STANDARDS FOR SOIL EROSION AND SEDIMENT CONTROL IN NEW JERSEY.

3. SEEDING
A. SELECT SEED FROM RECOMMENDATIONS IN TABLE.

3* PLANT HARDINESS ZONE (SEE BELOW)

ZONE 5B (-10 TO -15)
PORTIONS OF SUSSEX AND WARREN COUNTIES

ZONE 6A (-5 TO -10)
PORTIONS OF SUSSEX, WARREN, PASSAIC, MORRIS, SOMERSET AND HUNTERDON COUNTIES.

ZONE 6B (0 TO -5)
PORTIONS OR BERGEN, CAMDEN, ESSEX AND GLOUCESTER, HUNTERDON, MERCER, MIDDLESEX, HUDSON,MONMOUTH, OCEAN, BURLINGTON, MORRIS, PASSAIC, SOMERSET, UNION, ATLANTIC, CUMBERLAND, AND CAPE MAY COUNTIES.

ZONE 7A (5 TO 0)
PORTIONS OF CAMDEN, GLOUCESTER, SALEM, CUMBERLAND, CAPE MAY, ATLANTIC, BURLINGTON, OCEAN, AND MONMOUTH COUNTIES. ZONE 7B (10 TO 5) PORTIONS OF CAPEMAY, ATLANTIC, OCEAN AND MONMOUTH COUNTIES.

B. CONVENTIONAL SEEDING - APPLY SEED UNIFORMLY BY HAND, CYCLONE (CENTRIFUGAL) SEEDER, DROP SEEDER, DRILL OR CULTIPACKER SEEDER. EXCEPT FOR DRILLED, HYDROSEEDED OR CULTIPACKED SEEDINGS, SEED SHALL BE INCORPORATED INTO THE SOIL, TO A DEPTH OF 1/4 TO 1/2 INCH, BY RAKING OR DRAGGING. DEPTH OF SEED PLACEMENT MAY BE 1/4 INCH DEEPER ON COARSE TEXTURED SOIL.

C. HYDROSEEDING IS A BROADCAST SEEDING METHOD USUALLY INVOLVING A TRUCK OR TRAILER MOUNTED TANK, WITH AN AGITATION SYSTEM AND HYDRAULIC PUMP FOR MIXING SEED, WATER AND FERTILIZER AND SPRAYING THE MIX ONTO THE PREPARED SEEDBED. MULCH SHALL NOT BE INCLUDED IN THE TANK WITH SEED. SHORT FIBERED MULCH MAY BE APPLIED WITH A HYDROSEEDER FOLLOWING SEEDING. HYDROSEEDING IS NOT A PREFERRED SEEDING METHOD BECAUSE SEED AND FERTILIZER ARE APPLIED TO THE SURFACE AND NOT INCORPORATED INTO THE SOIL. POOR SEED TO SOIL CONTACT OCCURS REDUCING SEED GERMINATION AND GROWTH. HYDROSEEDING MAY BE USED FOR AREAS TOO STEEP FOR CONVENTIONAL EQUIPMENT TO TRAVERSE OR TOO OBSTRUCTED WITH ROCKS, STUMPS, ETC.

D. AFTER SEEDING, FIRMING THE SOIL WITH A CORRUGATED ROLLER WILL ASSURE GOOD SEED-TO-SOIL CONTACT, RESTORE CAPILLARITY, AND IMPROVE SEEDING EMERGENCE. THIS IS THE PREFERRED METHOD. WHEN PERFORMED ON THE CONTOUR, SHEET EROSION WILL BE MINIMIZED AND WATER CONSERVATION ON SITE WILL BE MAXIMIZED.

4. MULCHING
MULCHING IS REQUIRED ON ALL SEEDING. MULCH WILL INSURE AGAINST EROSION BEFORE GRASS IS ESTABLISHED AND WILL PROMOTE FASTER AND EARLIER ESTABLISHMENT, (THE EXISTENCE OF VEGETATION SUFFICIENT TO CONTROL SOIL EROSION SHALL BE DEEMED COMPLIANCE WITH THIS MULCHING REQUIREMENT.

A. STRAW OR HAY. UNROTTED SMALL GRAIN STRAW, HAY FREE OF SEEDS, OR SALT HAY TO BE APPLIED AT THE RATE OF 1-1/2 TO 2 TONS PER ACRE (70 TO 90 POUNDS PER 1,000 SQUARE FEET), EXCEPT THAT WHERE A CRIMPER IS USED INSTEAD OF LIQUID MULCH-BINDER (TACKIFYING OR ADHESIVE AGENT), THE RATE OF APPLICATION IS 3 TONS PER ACRE. MULCH CHOPPER-BLOWERS MUST NOT GRIND THE MULCH. HAY MULCH IS NOT RECOMMENDED FOR ESTABLISHING FINE TURF OR LAWNS DUE TO THE PRESENCE OF WEED SEED.

APPLICATION
SPREAD UNIFORMLY BY HAND MECHANICALLY SO THAT APPROXIMATELY 85% OF THE SOIL SURFACE WILL BE COVERED. FOR UNIFORM DISTRIBUTION OF HAND-SPREAD MULCH, DIVIDE AREA INTO APPROXIMATELY 1,000 SQUARE FEET SECTIONS AND DISTRIBUTE 70 TO 90 POUNDS WITHIN EACH SECTION.

ANCHORING SHOULD BE ACCOMPLISHED IMMEDIATELY AFTER PLACEMENT TO MINIMIZE LOSS BY WIND OR WATER. THIS MAY BE DONE BY ONE OF THE FOLLOWING METHODS, DEPENDING UPON THE SIZE OF THE AREA, STEEPNESS OF SLOPES, AND COSTS.

1. PEG AND TWINE - DRIVE 8 TO 10 INCH WOODEN PEGS TO WITHIN 2 TO 3 INCHES OF THE SOIL SURFACE EVERY 4 FEET IN ALL DIRECTIONS. STAKES MAY BE DRIVEN BEFORE OR AFTER APPLYING MULCH. SECURE MULCH TO SOIL SURFACE BY STRETCHING TWINE BETWEEN PEGS IN A CRISS-CROSS AND A SQUARE PATTERN. SECURE TWINE AROUND EACH PEG WITH TWO OR MORE ROUND TURNS.
2. MULCH NETTINGS - STAPLE PAPER, JUTE, COTTON, OR PLASTIC NETTINGS TO THE SOIL SURFACE. USE A DEGRADABLE NETTING IN AREAS TO BE MOWED.
3. CRIMPER (MULCH ANCHORING TOOL) - A TRACTOR-DRAWN IMPLEMENT, SOMEWHAT LIKE A DISC-HARROW, ESPECIALLY DESIGNED TO PUSH OR CUT SOME OF THE BROADCAST LONG FIBER MULCH 3 TO 4 INCHES INTO THE SOIL SO AS TO ANCHOR IT AND LEAVE PART STANDING UPRIGHT. THIS TECHNIQUE IS LIMITED TO AREAS TRAVERSABLE BY A TRACTOR, WHICH MUST OPERATE ON THE CONTOUR OF SLOPES. STRAW MULCH RATE MUST BE 3 TONS PER ACRE. NO TACKIFYING OR ADHESIVE AGENT IS REQUIRED.
4. LIQUID MULCH-BINDERS - MAY BE USED TO ANCHOR SALT HAY OR STRAW MULCHES.

a. APPLICATIONS SHOULD BE HEAVIER AT EDGES WHERE WIND CATCHES THE MULCH, IN VALLEYS, AND AT CRESTS OF BANKS. REMAINDER OF AREA SHOULD BE UNIFORM IN APPEARANCE.

b. USE ONE OF THE FOLLOWING:

(1) EMULSIFIED ASPHALT - (SS-1, CSS-1, CMS-2, MS-2, RS-1, RS-2, CRS-1, AND CRS-2). APPLY 0.04 GAL./SQ. YD. OR 194 GAL./ACRE ON FLAT SLOPES LESS THAN 8 FEET HIGH, ON SLOPES 8 FEET OR MORE HIGH, USE 0.075 GAL./SQ. YD. OR 363 GAL./ACRE. THESE MATERIALS MAY BE DIFFICULT TO APPLY UNIFORMLY AND WILL DISCOLOR SURFACES.

(2) ORGANIC AND VEGETABLE BASED BINDERS - NATURALLY OCCURRING, POWDER BASED, HYDROPHILIC MATERIALS WHEN MIXED WITH WATER FORMULATES A GEL AND WHEN APPLIED TO MULCH UNDER SATISFACTORY CURING CONDITIONS WILL FORM MEMBRANED NETWORKS OF INSOLUBLE POLYMERS. THE VEGETABLE GEL SHALL BE PHYSIOLOGICALLY HARMLESS AND NOT RESULT IN A PHYTOTOXIC EFFECT OR IMPEDE GROWTH OF TURFGRASS. USE AT RATES AND WEATHER CONDITIONS AS RECOMMENDED BY THE MANUFACTURER TO ANCHOR MULCH MATERIALS. MANY NEW PRODUCTS ARE AVAILABLE, SOME OF WHICH MAY NEED FURTHER EVALUATION FOR USE IN THIS STATE.

(3) SYNTHETIC BINDERS - HIGH POLYMER SYNTHETIC EMULSION, MISCIBLE WITH WATER WHEN DILUTED AND FOLLOWING APPLICATION TO MULCH, DRYING AND CURING SHALL NO LONGER BE SOLUBLE OR DISPERSIBLE IN WATER. IT SHALL BE APPLIED AT RATES RECOMMENDED BY THE MANUFACTURER AND REMAIN TACKY UNTIL GERMINATION OF GRASS.

B. WOOD-FIBER OR PAPER-FIBER MULCH. SHALL BE MADE FROM WOOD, PLANT FIBERS OR PAPER CONTAINING NO GROWTH OR GERMINATION INHIBITING MATERIALS, USED AT THE RATE OF 1,500 POUNDS PER ACRE (OR AS RECOMMENDED BY THE PRODUCT MANUFACTURER) AND MAY BE APPLIED BY A HYDROSEEDER. THIS MULCH SHALL NOT BE MIXED IN THE TANK WITH THE SEED. USE IS LIMITED TO FLATTER SLOPES AND DURING OPTIMUM SEEDING PERIODS IN SPRING AND FALL.

C. PELLETIZED MULCH. COMPRESSED AND EXTRUDED PAPER AND/OR WOOD FIBER PRODUCT, WHICH MAY CONTAIN CO-POLYMERS, TACKIFIERS, FERTILIZERS AND COLORING AGENTS. THE DRY PELLETS, WHEN APPLIED TO A SEEDED AREA AND WATERED, FORM A MULCH MAT. PELLETIZED MULCH SHALL BE APPLIED IN ACCORDANCE WITH THE MANUFACTURERS RECOMMENDATIONS. MULCH MAY BE APPLIED BY HAND OR MECHANICAL SPREADER AT THE RATE OF 60-75 LBS/1,000 SQUARE FEET AND ACTIVATED WITH 0.2 TO 0.4 INCHES OF WATER. THIS MATERIAL HAS BEEN FOUND TO BE BENEFICIAL FOR USE ON SMALL LAWN OR RENOVATION AREAS, SEEDED AREAS WHERE WEED-SEED FREE MULCH IS DESIRED OR ON SITES WHERE STRAW MULCH AND TACKIFIER AGENT ARE NOT PRACTICAL OR DESIRABLE.

APPLYING THE FULL 0.2 TO 0.4 INCHES OF WATER AFTER SPREADING PELLETIZE MULCH ON THE SEED BED IS EXTREMELY IMPORTANT FOR SUFFICIENT ACTIVATION AND EXPANSION OF THE MULCH TO PROVIDE SOIL COVERAGE.

STANDARD FOR PERMANENT VEGETATIVE COVER FOR SOIL STABILIZATION:

DEFINITION
ESTABLISHMENT OF PERMANENT VEGETATIVE COVER ON EXPOSED SOILS WHERE PERENNIAL VEGETATION IS NEEDED FOR LONG TERM PROTECTION.

APPLY LIMESTONE IN ACCORDANCE WITH THE TABLE BELOW AND THE RESULTS OF SOIL TESTING. THIS FORM MUST BE FILLED OUT AND SUBMITTED PRIOR TO RECEIVING A CERTIFICATE OF COMPLIANCE FROM THE DISTRICT.
4. IN THE EVENT THAT TESTING INDICATES COMPACTION IN EXCESS OF THE MAXIMUM THRESHOLDS INDICATED FOR THE SIMPLIFIED TESTING METHODS (SEE DETAILS BELOW), THE CONTRACTOR SHALL HAVE THE OPTION TO PERFORM EITHER (1) COMPACTION MITIGATION OVER THE ENTIRE MITIGATION AREA DENOTED ON THE PLAN (EXCLUDING EXEMPT AREAS), OR (2) PERFORM ADDITIONAL, MORE DETAILED TESTING TO ESTABLISH THE LIMITS OF EXCESSIVE COMPACTION WHEREUPON ONLY THE EXCESSIVELY COMPACTED AREAS WOULD REQUIRE COMPACTION MITIGATION. ADDITIONAL DETAILED TESTING SHALL BE PERFORMED BY A TRAINED, LICENSED PROFESSIONAL.

COMPACTION TESTING METHODS

A. PROBING WIRE TEST (SEE DETAIL)
B. HAND-HELD PENETROMETER TEST (SEE DETAIL)
C. TUBE BULK DENSITY TEST (LICENSED PROFESSIONAL ENGINEER REQUIRED)
D. NUCLEAR DENSITY TEST (LICENSED PROFESSIONAL ENGINEER REQUIRED)

1. LIMIT THE EXCAVATION AREA AND EXPOSURE TIME WHEN HIGH ACID-PRODUCING SOILS ARE ENCOUNTERED.
2. TOPSOIL STRIPPED FROM THE SITE SHALL BE STORED SEPARATELY FROM TEMPORARILY STOCKPILED HIGH ACID-PRODUCING SOILS.
3. STOCKPILES OF HIGH ACID-PRODUCING SOIL SHOULD BE LOCATED ON LEVEL LAND TO MINIMIZE ITS MOVEMENT, ESPECIALLY WHEN THIS MATERIAL HAS A HIGH CLAY CONTENT.
4. TEMPORARILY STOCKPILED HIGH ACID-PRODUCING SOIL MATERIAL TO BE STORED MORE THAN 48 HOURS SHOULD BE COVERED WITH PROPERLY ANCHORED, HEAVY GRADE SHEETS OF POLYETHYLENE WHERE POSSIBLE. IF NOT POSSIBLE, STOCKPILES SHALL BE COVERED WITH A MINIMUM OF 3 TO 6 INCHES OF WOOD CHIPS TO MINIMIZE EROSION OF THE STOCKPILE. SILT FENCE SHALL BE INSTALLED AT THE TOE OF THE SLOPE TO CONTAIN MOVEMENT OF THE STOCKPILED MATERIAL. TOPSOIL SHALL NOT BE APPLIED TO THE STOCKPILES TO PREVENT TOPSOIL CONTAMINATION WITH HIGH ACID-PRODUCING SOIL.
5. HIGH ACID-PRODUCING SOILS WITH A PH OF 4.0 OR LESS OR CONTAINING IRON SULFIDE (INCLUDING BORROW FROM CUTS OR DREDGED SEDIMENT) SHALL BE ULTIMATELY PLACED OR BURIED WITH LIMESTONE APPLIED AT THE RATE OF 10 TONS PER ACRE (OR 450 POUNDS PER 1,000 SQUARE FEET OF SURFACE AREA) AND COVERED WITH A MINIMUM OF 12 INCHES OF SETTLED SOIL WITH A PH OF 5.0 OR MORE EXCEPT AS FOLLOWS:
   a. AREAS WHERE TREES OR SHRUBS ARE TO BE PLANTED SHALL BE COVERED WITH A MINIMUM OF 24 INCHES OF SOIL WITH A PH OR 5 OR MORE.

Attn: Mr. Joseph Raday, PE and Mr. Harry Rohlfing, EIT

RE: Geotechnical Engineering Services
Kenwood Ave, Walnut St, and Princess Ave – Haddon Walnut Princess Homes
Camden, NJ

Dear Mr. Joseph Raday and Mr. Harry Rohlfing:

The following is a summary of the field exploration to locate the depth of the seasonal high water table and evaluate the ability for the current site soils to infiltrate. Work was initiated in general accordance with the Scope of Services presented in our change order dated 7/21/25, and your subsequent authorization to proceed.

BACKGROUND

The project sites are located in Camden, NJ 08103. For Test Pits 1 and 2, the site is 919 Princess Avenue. For Test Pits 3 and 4, the site is Block 1286, Lots 7 and 8 on Walnut Street. For Test Pits 5 and 6, the sites are 1018 and 1023 Princess Avenue. For Test Pits 7 and 8, the sites are 1463 and 1481 Kenwood Avenue. Test Pit 9 is located at Baird Boulevard and Belleview Avenue. All test pit locations can be seen on the attached Location Plans.

The objectives of this geotechnical study were to determine subsurface conditions at the project sites and make a determination of the potential seasonal high water table and infiltration rate of the subsoil.

FIELD WORK

On August 21-22, 2025, prior to any excavation, a clear testing area was confirmed. Then, a total of 6 test pits were excavated by Ambient Excavation using a rubber-tire backhoe. The locations of the test pits were selected within the area of the proposed homes and established in the field by Pennoni personnel. For each site, 1 exploratory test pit would be excavated to a depth of at least 12 ft below grade to identify the soil stratigraphy, depth to groundwater and/or limiting zones, and the potential seasonal high water table. It must be noted that the locations for Test Pits 5, 6, and 7 were not performed due to site accessibility issues (fencing and parked cars).

Adjacent to the exploratory pit, another test pit would be excavated to the most hydraulically restrictive layer no deeper than 5 ft in order to perform the single ring infiltration test in general accordance with the New Jersey Stormwater BMP, Chapter 12 (NJBMP). It must be noted that the infiltration test for Test Pit 4 was not performed due to site size constraints after encountering brick fill at 5 ft deep.

SUBSURFACE STRATIGRAPHY

The test pits generally disclosed a 1 ft to 4 ft thick upper layer of sand, underlain by a layer of sandy clay/sandy clay loam (except TP-3 which was underlain by a loamy sand) of varying thickness followed by another layer of sand shown in the Test Pit and Infiltration Logs (TP-1 to TP-9 and I-1 to I-9).

INFILTRATION TESTING SUMMARY

Pennoni performed 1 single ring infiltration test for each test pit (except for Test Pit 4 due to site size constraints) in general accordance with the NJBMP.

Per the testing procedures, a presoak was performed by filling the ring to approximately 3 in of water and allowing it to drain completely. The ring was then refilled, and the time for the water to drop 1 in was recorded. After that, the ring was refilled to 3 in. This procedure was repeated until a stabilized infiltration rate was achieved. A stabilized infiltration rate is achieved when the difference between 2 measurements of time is within 0.5 seconds of each other. At least 3 observed field intake rates shall be observed before the test is completed unless the elapsed time to drop 1 in is more than 1 hour for 2 consecutive tests.

The results of the single ring infiltration tests performed can be summarized in Table 1 below:

Table 1: Field Testing Results

Test #	Limiting Zone	Tested Stratum	Field Infiltration Rate (in/hr.)
I-1	NE	Sandy Clay	<1.00
I-2	NE	Sandy Clay	<1.00
I-3	NE	Loamy Sand	3.02
I-8	NE	Sandy Clay	<1.00
I-9	NE	Sandy Clay Loam	<1.00
NE – Not Encountered			

Most field infiltration rates were measured as <1.0 in/hr while I-3 was greater due to its location in a more permeable layer. It must be noted that even relatively low fines contents (silts and/or clays as low as 10%) can significantly reduce the permeability of a soil mixture, thereby limiting the long-term performance of infiltration BMPs.
